Contents

NO 1 JANUARY 1981

LETTERS TO THE EDITOR

On certain local observables generated by the momenta — *K McFarlane and K-K Wan* — L1

Phenomenological renormalisation of the self avoiding walk in two dimensions — *B Derrida* — L5

Towards electrodynamical models of particles — *P F Browne* — L11

Varying exponent of the impurity magnetisation in the Ising chain with a transverse field — *K Uzelac, R Jullien and P Pfeuty* — L17

PAPERS

Mathematical Methods in Physics

Kinematic groups and dimensional analysis — *J F Cariñena, M A del Olmo and M Santander* — 1

Natural labelling schemes for simple roots and irreducible representations of exceptional Lie algebras — *R C King and A H A Al-Qubanchi* — 15

The Weyl groups and weight multiplicities of the exceptional Lie groups — *R C King and A H A Al-Qubanchi* — 51

Kronecker products of representations of exceptional Lie groups — *R C King* — 77

Clebsch–Gordan coefficients for the permutation group — *G G Sahasrabudhe, K V Dinesha and C R Sarma* — 85

Lie algebra projectors and the kinematics of collective motions — *P Gulshani* — 97

An approximate analytical treatment of the $E \otimes \epsilon$ Jahn–Teller effect — *H Barentzen, G Olbrich and M C M O'Brien* — 111

Classical and Quantum Physics: Mechanics and Fields

Aspects of a representation of quantum theory in terms of classical probability theory by means of integration in Hilbert space — *A Bach* — 125

Quantum bounds on the information capacity of narrow-band free-space links without extraneous noise — *W G Chambers* — 133

Difficulties with the inverse scattering transform method in quantum field theory — *B Davies* — 145

On Klauder's pseudo-free oscillator — *B S Kay* — 155

Electron diffraction by a cylindrical capacitor — *W L Schaich* — 165

Relativity and Gravitation

Type-D space–times with a Killing tensor — *M Demiański and M Francaviglia* — 173

The localisation of energy in general relativity: II — *F I Cooperstock, R S Sarracino and S Ş Bayin* — 181

Statistical Physics and Thermodynamics

The pseudo-free 128-vertex model — *S Samuel* — 191

The correlation functions in the 32-vertex model — *S Samuel* — 211

Averages in restricted random walks — *C Domb* — 219

Correlation function of one-dimensional Ising model with power-law potential — *A K Bassiouny* — 227

Equations of State, Phase Equilibria and Phase Transitions

Correction to scaling exponents and critical properties of the n-vector model with dimensionality >4 — *A J Guttmann* — 233

Finite-lattice methods in quantum Hamiltonian field theory: I. The Ising model
C J Hamer and M N Barber 241

Finite-lattice methods in quantum Hamiltonian field theory: II. O(2) and O(3) Heisenberg models *C J Hamer and M N Barber* 259

Magnetic Resonances and Relaxation in Condensed Matter; Mössbauer Effect

Experimental observations on the resonant amplitude modulation of Mössbauer gamma rays *L T Tsankov* 275

COMMENTS

Comment on Parisi's equation for the SK model for spin glasses *B Duplantier* 283

Perimeter polynomials for bond percolation processes
M F Sykes, D S Gaunt and M Glen 287

CORRIGENDUM 295

NO 2 FEBRUARY 1981

LETTERS TO THE EDITOR

Band to band hopping in one-dimensional maps *S J Shenker and L P Kadanoff* L23

The asymptotic nature of isolated systems *M Ludvigsen* L27

Monte Carlo renormalisation-group approach to percolation on a continuum: test of universality *T Vicsek and J Kertész* L31

Dilute Potts model, duality and site–bond percolation *F Y Wu* L39

Critical exponents of two-dimensional Potts and bond percolation models
H W J Blöte, M P Nightingale and B Derrida L45

PAPERS

Mathematical Methods in Physics

Orthogonal polynomials in transport theories *J S Dehesa* 297

Measurement-theory approach to an internal energy function *T Nakagomi* 303

Spinors and related tensors invariant under E(3) and its subgroups
J Beckers and V Hussin 317

The symmetric group: branching rules, products and plethysms for spin representations
Luan Dehuai and B G Wybourne 327

Reduced matrix elements of a coupled tensor in a subgroup basis *K Bharathi* 349

Theorem relating to the development of a reflection coefficient in terms of a small parameter *J Heading* 357

Classical and Quantum Physics: Mechanics and Fields

Improved energy lower bound for the N-fermion system *E B Balbutsev* 369

A harmonic oscillator perturbed by the potential $\lambda x^2/(1+gx^2)$ *K V Bhagwat* 377

Scattering states for a finite chain in one dimension *M Cvetič and L Pičman* 379

Exact solution of the Schrödinger and Klein–Gordon equations for generalised Hulthén potentials *M Znojil* 383

Relativity and Gravitation

Some Einstein spaces and their global properties *S T C Siklos* 395

Trajectories and spin motion of massive spin-$\frac{1}{2}$ particles in gravitational fields
J Audretsch 411

Statistical Physics and Thermodynamics

A numerical study of the general Rayleigh's piston model
J Andrew Barker, M R Hoare and S Raval 423

Surface critical exponents for self-avoiding walks on the tetrahedral lattice
T Ishinabe and S G Whittington 439
Optimal real-space renormalisation *T A Witten Jr and J J Prentis* 447
Infinite- and finite-spin Ising chains at low temperatures
M R Davies, C K Harris and R B Stinchcombe 459

The Physics of Elementary Particles and Fields

New topological indices in SO(3) Einstein–Yang–Mills theory *R F Picken* 471
Higher-order Noether symmetries and constants of the motion *W Sarlet and F Cantrijn* 479
On the non-unique definition of the current in the Thirring model
B L Aneva, S G Mikhov and D T Stoyanov 493
Stable states of a relativistic bilocal stochastic oscillator: a new quark–lepton model
N Cufaro Petroni, Z Marić, Dj Živanović and J P Vigier 501

Electricity and Magnetism; Fields and Charged Particles

Analysis of intensity effects in laser electron-beam backscattering in terms of generalised Bessel functions *C Leubner and E M Strohmaier* 509

Condensed Matter: Electronic Structure, Electrical, Magnetic, and Optical Properties

Renormalisation-group treatment of systems with superconducting and other orderings in a magnetic field *N S Tonchev and D I Uzunov* 521
Vortices in the two-dimensional $s = \frac{1}{2}$ XY model *D D Betts, F C Salevsky and J Rogiers* 531

COMMENT

Comments on 'On a proposed new test of Heisenberg's principle'
D Home and S Sengupta 539

ADDENDUM

Correction to 'Invariant volumes of compact groups' *M S Marinov* 543

CORRIGENDUM 545

NO 3 MARCH 1981

LETTERS TO THE EDITOR

A configurational phase transition induced by topological entanglements between long chain molecules *M G Brereton and S Shah* L51
Single-scaling-field approach for an isolated polymer chain *S Redner and P J Reynolds* L55
Localisation–delocalisation transition in a solid-on-solid model with a pinning potential
T W Burkhardt L63
The pair correlation function in the ground state of the two-dimensional spin-$\frac{1}{2}$ XY model
S B Kelland, D D Betts and J Oitmaa L69

PAPERS

Mathematical Methods in Physics

Diagram and superfield techniques in the classical superalgebras
P H Dondi and P D Jarvis 547
Permutation group and interacting subsystems of particles *C R Sarma* 565
On the stability of the solution of Abel's integral equation *C K Chan and P Lu* 575
A method of integration over matrix variables: II *S Chadha, G Mahoux and M L Mehta* 579

Classical and Quantum Physics; Mechanics and Fields

On the Lie symmetries of the classical Kepler problem *G E Prince and C J Eliezer* 587
Rotating fields and particle-like states of electron–positron systems *P F Browne* 597

Exact solutions of the motion equations for a classical spinning particle with radiation damping *R Gambini and A Trias* 621
Non-stationary thermodynamics and wave propagation in heat conducting viscous fluids *F Bampi and A Morro* 631
Born expansions for Coulomb-type interactions *F Gesztesy and B Thaller* 639
Alternative renormalisation in the Kondo problem *P Lloyd, A W Mirtschin and D M Cragg* 659

Relativity and Gravitation

Gravitational radiation resistance, radiation damping, and field fluctuations *G Schäfer* 677

Statistical Physics and Thermodynamics

Semi-infinite ϕ^4 systems: ε expansions for susceptibility exponents *J S Reeve and A J Guttmann* 687
Scaling studies of percolation phenomena in systems of dimensionality two to seven: II. Equation of state *H Nakanishi and H E Stanley* 693
Critical point of a triangular Potts model with two- and three-site interactions *F Y Wu and R K P Zia* 721
Coagulation with fragmentation *J D Barrow* 729

The Physics of Elementary Particles and Fields

Some remarks on the electronic states in disordered materials *G Parisi* 735
Some remarkable spin-$\frac{1}{2}$-like algebraic properties of spin-$\frac{3}{2}$ matrices *F E A dos Santos and J Jayaraman* 745
Solution of the gauge identities in the axial gauge *R Delbourgo* 753

ADDENDUM

Modification of the extended (2×2) algorithm by a variational principle *K G Kreuzer, H G Miller and W A Berger* 763

CORRIGENDUM 767

NO 4 APRIL 1981

LETTERS TO THE EDITOR

The Poincaré group, the Dirac monopole and photon localisation *H Bacry* L73
On the reducibility of the Voigt functions *H Exton* L75
A note on quasi-periodic states *F Gesztesy and H Mitter* L79
Computation of the critical exponents of percolation *F Fucito and E Marinari* L85
q-state Potts models in d dimensions: Migdal–Kadanoff approximation *D Andelman and A N Berker* L91
On the conformal covariant energy–momentum tensor *Bo-Wei Xu* L97
On the critical region of systems with two order parameters *N S Tonchev and D I Uzunov* L103

PAPERS

Mathematical Methods in Physics

Oscillator Wigner functions *G S Pogosyan, Ya A Smorodinsky and V M Ter-Antonyan* 769
Irreducible representations of the symmetry groups of polymer molecules II *I B Božović and M Vujičić* 777
Complementary variational principles and variational–iterative principles *B L Burrows and A J Perks* 797

Classical and Quantum Physics; Mechanics and Fields

Remarks on Turschner's eigenvalue formula — *M S Ashbaugh and J D Morgan III* 809

Irregular scattering functions — *M Kolsrud* 821

Relativity and Gravitation

General relativistic gravitational field effects on superfluid phase interference devices — *A Widom, G Megaloudis, J E Sacco and T D Clark* 841

The geometric structure of a complexified theory of gravitation — *G Kunstatter and R Yates* 847

Statistical Physics and Thermodynamics

Anisotropic bond percolation by position-space renormalisation group — *H Nakanishi, P J Reynolds and S Redner* 855

The Kikuchi approximation: a reformulation and application to the percolation problem — *A P Young* 873

Thermodynamics of 1D soliton-bearing Hamiltonians: Transfer integral structure and correlation functions — *A R Bishop* 883

The Physics of Elementary Particles and Fields

Effective potentials for twisted fields — *R Banach* 901

On the structure of ultraviolet divergences in the vacuum region of quantum electrodynamics — *B Dragović and B Sazdović* 915

Gauge covariance and the gauge technique — *R Delbourgo, B W Keck and C N Parker* 921

Macromolecules and Polymer Molecules

Configurational properties of dilute polymer solutions, dimensionality and perturbation theory — *M K Kosmas* 931

Electricity and magnetism; Fields and Charged Particles

The electrostatic problem of a portion of sphere protruding from a plane electrode in an electric field — *R Le Ny* 945

Condensed Matter: Structure, Thermal and Mechanical Properties

Quasihydrodynamic theory of ionic conductance in spatially homogeneous solutions of strong electrolytes — *A R Altenberger* 957

Ladder approximation to fermion quasi-particle interaction for exponentially varying bare potentials — *R E Nettleton* 971

Magnetic Properties and Materials

Domain wall singularity in a Landau–Ginzburg model — *I D Lawrie and M J Lowe* 981

A boundary layer theory for the distribution of magnetisation in small spherical ferromagnetic particles — *G Rowlands* 993

CORRIGENDUM 1003

NO 5 MAY 1981

LETTERS TO THE EDITOR

The existence of energy gaps for three-dimensional systems without long-range order — *A Nenciu and G Nenciu* L109

Solitary waves in two-dimensional diatomic lattice — *G Behnke and H Büttner* L113

A simple algorithm for the calculation of moments of the density of states in a one-dimensional random binary alloy — *R Ramírez and M Orszag* L117

The maximal kinematical group of the general Schrödinger equation *Bo-Wei Xu* L123
On the general expression of the conformally covariant energy–momentum tensor *Bo-Wei Xu* L125
Estimates of the A^2-term in the interaction of matter with radiation *P Pfeifer* L129
The η invariant for charged spinors in Taub-NUT *C N Pope* L133
Surface terms in higher derivative gravity *T S Bunch* L139
Fokker–Planck dynamics of interacting Brownian particles *W Hess* L145
The Yang–Lee edge singularity by the phenomenological renormalisation group *K Uzelac and R Jullien* L151
Cluster size distribution above the percolation threshold *T C Lubensky and A J McKane* L157
Directed percolation: a finite-size renormalisation group approach *W Kinzel and J M Yeomans* L163
Order propagation near the percolation threshold *R Pike and H E Stanley* L169
The two-dimensional bound-diluted transverse Ising model at zero temperature *R R dos Santos* L179
$Z(2)$ gauge model on fractal lattices *D Dhar* L185
The Heisenberg antiferromagnetic chain *B Hu and C S Ting* L189
Monte Carlo simulation of a model of a surfactant *D B Abraham and E R Smith* L193
The velocity dependence of inter-soliton forces *G A Ringwood* L199
Nonlinear stability analysis in multilayer quasigeostrophic systems *S Pierini and A Vulpiani* L203

PAPERS

Mathematical Methods in Physics

Renormalised perturbation series *J Killingbeck* 1005
On the finite difference between divergent sum and integral *G Barton* 1009
A Fourier series approach to Burgers' equation *J Caldwell and P Wanless* 1029
Highest-weight representations of the sl($n+1$, C) algebras: maximal representations *Č Burdík, M Havlíček and P Exner* 1039
Subgroups of weak-direct products and magnetic axial point groups *M Damnjanović and M Vujičić* 1055
Some integrals involving associated Legendre functions and Gegenbauer polynomials *M L Laursen and K Mita* 1065
A theorem on the separation of a system of coupled differential equations *Cao xuan Chuan* 1069
Nonlinear differential–difference equations, associated Bäcklund transformations and Lax technique *M Bruschi and O Ragnisco* 1075
Nonlinear differential difference equations as Bäcklund transformations *D Levi* 1083

Classical and Quantum Physics; Mechanics and Fields

On the freedom of choice of the action-angle variables for Hamiltonian systems *M Antonowicz* 1099
Addition of an arbitrary number of different angular momenta *V V Mikhailov* 1107
A non-relativistic reduction of the Dirac equation in the free-particle basis *J Potvin* 1117
The spreading of wavepackets in quantum mechanics *M Andrews* 1123

Relativity and Gravitation

Exact spatially inhomogeneous cosmologies *J Wainwright* 1131

Statistical Physics and Thermodynamics

A note on the stochastic lattice-gas model *P Vanheuverzwijn* 1149
The square-lattice Ising model with first and second neighbour interactions *J Oitmaa* 1159

The Physics of Elementary Particles and Fields

The phases of two-dimensional spin and four-dimensional gauge systems with $Z(N)$ symmetry *F C Alcaraz and R Köberle* 1169

On the admissibility of repeated irreducible representations in barnacle-free unique-spin unique-mass relativistic wave equations *P M Mathews, B Vijayalakshmi, M Seetharaman and Y Takahashi* 1193

A class of SU(2) instanton configurations in curved space–times *B P Dolan* 1205

Optics

Analytic solutions for three- and four-wave mixing via generalised Bose operators *J Katriel and D G Hummer* 1211

Condensed Matter: Structure, Thermal and Mechanical Properties

On a phenomenological non-equilibrium entropy for a class of rigid heat conductors *J Casas-Vázquez and D Jou* 1225

COMMENT

The density operator approach to scattering theory *K L Sebastian* 1233

NO 6 JUNE 1981

LETTERS TO THE EDITOR

Exact solutions for anharmonic oscillators *G P Flessas* L209

Gravitational wave dispersion in condensed matter systems *A Widom, G Megaloudis, T D Clark and R J Prance* L213

Monte Carlo study of the antiferromagnetic Potts model on frustrated lattices *G S Grest* L217

Molecular-field theory of interface pinning in an external potential *T W Burkhardt and V R Vieira* L223

PAPERS

Mathematical Methods in Physics

On the structure of equations integrable by the arbitrary-order linear spectral problem *B G Konopelchenko* 1237

The generalised Brillouin theorem *J Pian and C S Sharma* 1261

Constraints on physical amplitudes derived from a modified analytic interpolation problem *I Caprini* 1271

Eighth rank isotropic tensors and rotational averages *D L Andrews and W A Ghoul* 1281

Classical and Quantum Physics; Mechanics and Fields

Quantum mechanical ground states, nonlinear Schrödinger equations and linked cluster expansions *L P Kadanoff and M Kohmoto* 1291

A stochastic model for the motion of two relativistic particles *Kh Namsrai* 1307

On bosonisation in (1 + 1) dimensions *H Aratyn* 1313

On the uniqueness of the Segal quantisation of linear Bose systems *F Gallone and A Sparzani* 1341

Relativity and Gravitation

The Petrov type of a static vacuum space–time near a normal-dominated singularity *J D McCrea* 1351

Statistical Physics and Thermodynamics

Renormalisation group study of polyelectrolyte chains *G Jug and G Rickayzen* 1357

Non-linear dynamics of the fermion–boson model: interference between revivals and the transition to irregularity *H-I Yoo, J J Sanchez-Mondragon and J H Eberly* 1383

Orbital diamagnetism of a charged Brownian particle undergoing a birth–death process
A M Jayannavar and N Kumar 1399
One-dimensional models with $1/r^2$ interactions *J L Cardy* 1407
Nonlinear mode phenomenology for sine–Gordon breather excitations *A R Bishop* 1417

The Physics of Elementary Particles and Fields

Displaced Fock representations of the canonical commutation relations
P Basarab-Horwath 1431
A derivation of the Prasad–Sommerfield solution *D H Tchrakian* 1439
Harmonic maps and self-dual SU(3) gauge fields *B C Xanthopoulos* 1445
On the equivalence between the impact parameter and transverse momentum space formalisms for the Drell–Yan process *H F Jones and J Wyndham* 1457

Fluids, Plasmas, and Electric Discharges

Nonlinear scattering processes in the presence of a quantised radiation field: I. Non-relativistic treatment *J Bergou and S Varró* 1469

Condensed Matter: Structure, Thermal and Mechanical Properties

Auxiliary sites in the RISM approximation for molecular fluids
P T Cummings, C G Gray and D E Sullivan 1483

Electron States

Asymptotic expressions for the widths of low-lying energy bands in one-dimensional periodical potentials *T P Grozdanov and S Yu Slavyanov* 1513

NO 7 JULY 1981

LETTERS TO THE EDITOR

Stability of the Minkowski vacuum in the renormalised semiclassical theory of gravity *S Randjbar-Daemi* L229
The axial gauge for gravity *R Delbourgo* L235
Method for calculation of non-Gaussian generating functions in lattice models
W Jeżewski L239
Percolative phase transition without the appearance of an infinite network
F Delyon, B Souillard and D Stauffer L243
Series estimate of the exponent β for bond percolation on a simple cubic lattice
D S Gaunt, S G Whittington and M S Sykes L247
A quantum Hamiltonian approach to the two-dimensional axial next-nearest-neighbour Ising model *M N Barber and P M Duxbury* L251
Charge neutrality and boundary conditions in the classical Coulomb lattice gas
E R Smith L257
Effective field of a dipole in a lattice of polarisable spheres *P Wielopolski* L263

PAPERS

Mathematical Methods in Physics

Wave propagation and Thom's theorem *A D Gorman, R Wells and G N Fleming* 1519
Renormalised perturbation theory of normal systems *C J Lambert and W E Hagston* 1533
Clebsch–Gordan coefficients for the corepresentations of Shubnikov point groups: II. Cubic groups *J N Kotzev and M I Aroyo* 1543
Regular products of the single-hook characters of the unitary group.
N G El-Sharkaway, H A Jahn and R C King 1557

Integrable three-dimensional lattices *D Levi, L Pilloni and P M Santini* 1567

Asymptotic solutions of an elliptic equation system on a Riemannian manifold concentrated in the vicinity of a phase trajectory *V S Buldyrev and V E Nomofilov* 1577

Singularities of plane curves which occur as singular sections of the bifurcation sets of the cuspoid catastrophes *F J Wright* 1587

Orthogonal subspaces in an iterative method for the diagonalisation of Hermitian operators *G Bozzolo, M T Martin and A Plastino* 1601

Asymptotic solutions of time dependent anharmonic oscillator equation *M-P Moraux, E Fijalkow and M R'Feix* 1611

Classical and Quantum Physics: Mechanics and Fields

The average Riemann curvature of conservative systems in classical mechanics *J F C van Velsen* 1621

Quanternion quantum mechanics as a true 3+1-dimensional theory of tachyons *J Souček* 1629

A new approach to the eigenvalue problem in quantum mechanics: convergent perturbation theory for rising potentials *A V Turbiner* 1641

The anharmonic oscillator: perturbation series for cubic and quartic energy distortion *J E Drummond* 1651

On the Hilbert-space approach to classical time delay *D Bollé and J D'Hondt* 1663

Relativity and Gravitation

Separation of variables in Einstein spaces: I. Two ignorable and one null coordinate *C P Boyer, E G Kalnins and W Miller Jr* 1675

Axial vacuum symmetry of the unified gauge theories with the gravitational mechanism of instability *V N Nikolaenko* 1685

Statistical Physics and Thermodynamics

Spin–spin correlation function in the high-temmperature Villain model *R A Pelcovits* 1693

H theorems in statistical fluid dynamics *G F Carnevale, U Frisch and R Salmon* 1701

Modelling critical behaviour in terms of catastrophe theory and fractal lattices *K Keller* 1719

Number and density of percolating clusters *C M Newman and L S Schulman* 1735

The Physics of Elementary Particles and Fields

Extended Lorentz invariance and field theory *I M Benn and R W Tucker* 1745

Supersymmetry, the Barducci–Casalbuoni–Lusanna Lagrangian, and the Weyl group in *d* dimensions *D J Almond* 1761

On coexistence of the Higgs mechanism with the asymptotic freedom *O K Kalashnikov* 1775

Equivalence principle for spontaneously broken gauge fields with external sources *C Aragone* 1781

The Physics of Plasmas and Electric Discharges

The stabilisation of explosive instabilities in the presence of a third-order nonlinear effect *S De, T P Khan and R K Roychowdhury* 1789

Macromolecules and Polymer Molecules

A renormalisation group approach to the entropy of a single polymer *D J Elderfield* 1797

COMMENTS

Improved continued fraction treatment of the one-dimensional scattering problem *Ph Lambin and J P Vigneron* 1815

Comments on the Letter of Strnad concerning multidimensional time *E A B Cole* 1821

CORRIGENDUM 1823

NO 8 AUGUST 1981

LETTERS TO THE EDITOR

On the dynamical group of the charge–monopole system *A O Barut* L267
On the Lenz vector *R L Schafir* L269
Non-bijective canonical transformations in quantum mechanics *J Deenen* L273
Exact solution for vacuum Bianchi type III model with a cosmological constant *A Moussiaux, P Tombal and J Demaret* L277
The conformal anomaly and the renormalisation group *T S Bunch* L281
Percolation properties of a three-dimensional random resistor-diode network *S Redner and A C Brown* L285
Continuum percolation in two dimensions: Monte Carlo tests of scaling and universality for non-interacting discs *E T Gawlinski and H E Stanley* L291
Singular behaviour of the free energy in the sol–gel transition *M Daoud and A Coniglio* L301
Dynamics of Na^+–polystyrene sulphonate in solution at low ionic strength *F Grüner, W P Lehmann, H Fahlbusch and R Weber* L307

PAPERS

Mathematical Methods in Physics

Irreducible representations of the symmetry groups of polymer molecules: III. Consequences of time-reversal symmetry *I Božović and N Božović* 1825
The alternating group: branching rules, products and plethysms for ordinary and spin representations *Luan Dehuai and B G Wybourne* 1835
On Hamiltonian structure of integrable equations under the group and matrix reductions *B G Konopelchenko and V G Mokhnachev* 1849
A geometrical definition of spinors from 'orientations' in three-dimensional space leading to a linear spinor visualisation *R Kjellander* 1863
On the avoidance of cancellations in the matrix moment problem *R R Whitehead and A Watt* 1887
Symmetries and differential equations *J R Meinhardt* 1893

Classical and Quantum Physics; Mechanics and Fields

Renormalised perturbation theory of ordered systems *W E Hagston and C J Lambert* 1915
Large-N saddle points *C Aragão de Carvalho and V A Fateev* 1925

Relativity and Gravitation

Complete description of photon trajectories in the Kerr–Newman space–time *M Calvani and R Turolla* 1931
Vacuum stress tensor for a slightly squashed Einstein universe *R Critchley and J S Dowker* 1943
Solutions of f–g field equations *M Gürses* 1957
Field of a charged particle in Brans–Dicke theory of gravitation *D R K Reddy and V U M Rao* 1973
On-shell supercurrent multiplet for supergravity in six dimensions *R Puzalowski* 1977

Statistical Physics and Thermodynamics

Continuous percolation in one dimension *D Shalitin* 1983
Mean field theory of percolation with application to surface effects *K De'Bell and J W Essam* 1993
Finite-lattice extrapolations for Z_3 and Z_5 models *C J Hamer and M N Barber* 2009
Applications of partial differential approximants: test functions and dimensional cross-over in the Ising model *J F Stilck and S R Salinas* 2027
Series expansions for the zero-temperature transverse Ising model *L G Marland* 2047

Monte Carlo simulation of a planar Ising model roughening transition
D B Abraham and E R Smith 2059

Some exact and approximate solutions of the nonlinear Boltzmann equation with applications to aerosol coagulation *M M R Williams* 2073

Electricity and Magnetism; Fields and Charged Particles

Magnetic susceptibility of relativistic Fermi gas *E M Chudnovsky* 2091

Magnetic field due to helical currents on a torus *W N-C Sy* 2095

The Physics of Plasmas and Electric Discharges

Slowly varying nonlinear waves in a warm plasma stream *R J Gribben and E K Parkes* 2113

Parametric instabilities in randomly inhomogeneous plasma
T P Khan and R K Roychowdhury 2121

Macromolecules and Polymer Molecules

Viscosity of polymer solutions *M Muthukumar* 2129

Magnetic Properties and Materials

The generalised drone-fermion method and the semi-invariant approach for spin systems
G C Psaltakis and M G Cottam 2149

High-temperature series expansion analyses of mixed-spin Ising models
S L Schofield and R G Bowers 2163

COMMENTS

Comments on Robinson's thought experiment testing Heisenberg's principle *I Singh* 2171

A Dirac-like equation for the photon *T L Chow* 2173

CORRIGENDUM 2175

NO 9 SEPTEMBER 1981

LETTERS TO THE EDITOR

An exact solution of the Schrödinger equation for a multiterm potential
G P Flessas and A Watt L315

Comparison of classical and quantal spectra for the Hénon–Heiles potential
R A Pullen and A R Edmonds L319

Expansion coefficient of heat kernel of Laplacian operator in Riemann–Cartan space
T Kimura L329

Prolongation structure and linear eigenvalue equations for Einstein–Maxwell fields
D Kramer and G Neugebauer L333

Polymer statistics on a Cayley tree *S L A de Queiroz* L339

A new mapping between self-avoiding walks and the $n \to 0$ limit *P D Gujrati* L345

Percolation and conduction in a random resistor-diode network *S Redner* L349

Lower-dimensional defect transitions in self-avoiding walks and percolation
H Nakanishi L355

Confluent singularities in directed bond percolation *J Adler, M Moshe and V Privman* L363

Binding of a domain wall in the planar Ising ferromagnet *D B Abraham* L369

Virial expansion of a two-dimensional polymer chain: cancellation of logarithmic terms
C Domb and P J Ratcliffe L373

Metastable states in the solvable spin glass model *A J Bray and M A Moore* L377

PAPERS

Mathematical Methods in Physics

Dynamical group model of superfluid helium three *A I Solomon* 2177

Non-canonical subgroup restrictions of the unitary group $U(nm)\downarrow U(n)\otimes U(m)$ *G G Sahasrabudhe, K V Dinesha and C R Sarma* 2189

Asymptotic forms of convolved line profiles *N M Froment, P M Radmore and G Stephenson* 2201

Fourier transforms of distributions and associated Feynman integrals *H P Berg and J Tarski* 2207

An asymmetric form of the discrete Schrödinger equation with application to the inverse tunnelling problem *M Hron and M Razavy* 2215

Classical and Quantum Physics; Mechanics and Fields

Symmetries, first integrals and the inverse problem of Lagrangian mechanics *W Sarlet* 2227

Classical analogy of the concept of collective variables *L P Brito and C A Sousa* 2239

The redshift of hydrogen lines in a strong magnetic field *S H Patil* 2251

A simple nonlinear dissipative quantum evolution equation *N Gisin* 2259

Harmonic oscillator with exponentially decaying mass *R K Colegrave and M Sebawe Abdalla* 2269

Nonlinear scattering processes in the presence of a quantised radiation field: II. Relativistic treatment *J Bergou and S Varró* 2281

e–e scattering in the presence of an external field *J Bergou, S Varró and M V Fedorov* 2305

Relativity and Gravitation

New two- and three-parameter solutions of the MPST equation *K D Krori, T Chaudhury and R Bhattacharjee* 2317

Charge as a manifestation of (4 + 1) space–time *D J Booth* 2325

Determination of the metric tensor from components of the Riemann tensor *G B G McIntosh and W D Halford* 2331

A characteristic initial-value problem approach to the formation of inhomogeneities in the early universe *D S Chellone* 2339

World vectors, Jacobi vectors and Jacobi one-forms on a manifold with a linear symmetric connection *R Schattner and M Trümper* 2345

A gravitational analogue of the Aharonov–Bohm effect *L H Ford and A Vilenkin* 2353

Path integral and gravitational radiation damping *G Schäfer and H Dehnen* 2359

Linear approximation in a new theory of gravity *R B Mann and J W Moffat* 2367

Statistical Physics and Thermodynamics

Higher-order Einstein relations for nonlinear charge transport *S A Hope, G Féat and P T Landsberg* 2377

Critical exponents for the percolation problem and the Yang–Lee edge singularity *O F de Alcantara Bonfim, J E Kirkham A J McKane* 2391

Valences of sites in bond percolation *S G Whittington, K M Middlemiss and D S Gaunt* 2415

The pinning of a domain wall by weakened bonds in two dimensions *J T Chalker* 2431

Vulcanisation of a binary mixture of long polymers *A E González and M Daoud* 2441

The Physics of Elementary Particles and Fields

The Umezawa–Visconti relation for first-order field equations *W Cox* 2459

Some covariant representations of massless Fermi fields *K Kraus and R F Streater* 2467

Some covariant representations of massless boson fields *L Polley, G Reents and R F Streater* 2479

Goldstone modes and coexistence in isotropic N-vector models *I D Lawrie* 2489

Classical Geophysics, Astronomy and Astrophysics

A dynamical objection to the inversion of the Earth on its spin axis *V J Slabinski* 2503

NO 10 OCTOBER 1981

LETTERS TO THE EDITOR

Derivation of the Onsager–Machlup function by a minimisation of the Kullback–Leibler entropy *H Ito* L385
The positivity of the Bondi mass *M Ludvigsen and J A G Vickers* L389
Surface roughening for two-dimensional percolation at $p = 1$ *H Franke* L393
A Potts model with infinitely degenerate ground state *W Kinzel, W Selke and F Y Wu* L399
Directed percolation: pseudo-correlation length *W Klein and W Kinzel* L405
Remark on percolative phase transitions without infinite network *W Klein and D Stauffer* L413
Finite size scaling analysis of the dilute Baxter–Wu model *W Kinzel, E Domany and A Aharony* L417
Dissipative bifurcation ratio in the area-non-preserving Hénon map *B Hu* L423

PAPERS

Mathematical Methods

Symmetrised powers of rotation group representations *R C King, Luan Dehuai and B G Wybourne* 2509
Applications of non-standard analysis to relativistic quantum mechanics: I *C E Francis* 2539
Specific heats of classical spin systems and inhomogeneous differential approximants *J-H Chen and M E Fisher* 2553

Classical and Quantum Physics; Mechanics and Fields

On the differential geometry of the Euler–Lagrange equations, and the inverse problem of Lagrangian dynamics *M Crampin* 2567
Master equation derivation of quantum regression theorem *S Swain* 2577
Completely integrable N-body quantum systems in three dimensions *A O Barut and Y Kitagawara* 2581
The quantisation and measurement of momentum observables: II *K-K Wan and K McFarlane* 2595
Algebraical confinement of coloured states *J Rembieliński* 2609
A lower bound on the information capacity of a quantum narrow-band free-space link *W G Chambers* 2625
Second quantisation of the nonlinear Schrödinger equation *B Davies* 2631
The perturbation of some exactly soluble problems in wave mechanics by the method of potential envelopes *R L Hall and M Satpathy* 2645

Relativity and Gravitation

Multipole moments in general relativity *D G Willmer* 2653
Nonlinear effects of gravitational and electromagnetic radiation on the propagation of light *B Linet* 2673

Statistical Physics and Thermodynamics

Position-space renormalisation group for isolated polymer chains *S Redner and P J Reynolds* 2679
A comparison of approximation methods for kinetic corrections to lineshape predictions *E A Johnson* 2705
Upper bounds to the correlation functions of the random-bond Ising model and n-vector model with competing interactions *T Horiguchi and T Morita* 2715
Magnetisation in some frustration models *A Sütő* 2733
Finite size scaling and crossover phenomena: the XY chain in a transverse field at zero temperature *R R dos Santos and R B Stinchcombe* 2741

Random Ising model with long-range interactions *A Theumann* 2759
Phase diagrams of the triangular Ising antiferromagnet variational approximations *A Malakis* 2767
On the mean radius of gyration of a polymer chain *M K Kosmas* 2779
On the thermodynamics of independent Landau electrons *A Wasserman and J Karniewicz* 2789

General Theory of Fields and Particles

Long-range interaction between spins *P C Naik and T Pradhan* 2795
Noether symmetry of the single-particle system *Z Dongpei* 2807

Electron States

Dynamics of Bloch electrons in external electric fields: I. Bounds for interband transitions and effective Wannier Hamiltonians *A Nenciu and G Nenciu* 2817

Cosmology

Homogeneous radiation-filled universe in general scalar tensor theory *A Banerjee and N O Santos* 2829

CORRIGENDUM 2837

NO 11 NOVEMBER 1981

LETTER TO THE EDITOR

An axisymmetric stationary solution of Einstein's equations calculated by computer *C Hoenselaers* L427
Matrix mutual orthogonality and parameter independence *D J Newman* L429
Once more on multi-dimensional time *J Strnad* L433
Calculation of crossover exponent from Heisenberg to Ising behaviour using the fourth-order ε expansion *J E Kirkham* L437
Diffusivity and radius of random animals, percolation clusters and compact clusters *H Gould and K Holl* L443
The mechanism of stochastic resonance *R Benzi, A Sutera and A Vulpiani* L453
Series expansion studies of directed percolation: estimates of the correlation length exponents *J W Essam and K De'Bell* L459
Two-dimensional percolation: logarithmic corrections to the critical behaviour from series expansions *J Adler and V Privman* L463
On the possibility of stable quark and pion-condensed stars *B Kämpfer* L471

PAPERS

Mathematical Methods in Physics

The perturbed ladder operator method. Perturbed eigenvalues and eigenfunctions from finite difference considerations *N Bessis, G Bessis and G Hadinger* 2839
Four-dimensional kinks *G S Whiston* 2861
The equality of multiple integrals in the series development of a reflection coefficient for waves governed by a general linear differential equation *J Heading* 2881

Classical and Quantum Physics; Mechanics and Fields

On the energy shape dependences of ellipsoidal leptodermous systems *B Remaud and G Royer* 2897
Path-integral forms for the Klein–Gordon wavefunction *F G Krausz* 2911
'Proper time' and the Dirac equation *J R Ellis* 2917
Schrödinger lumps *S M Roy and V Singh* 2927

Relativity and Gravitation

Space–time topology and spontaneous symmetry breaking *C J Isham* 2943

A gravitational model for a matter-free torsion ball *T Dereli and R W Tucker* 2957

Statistical Physics and Thermodynamics

Testing field-theoretical methods on a classical cubic equation with stochastic driving *S Gauthier, M-E Brachet and J-D Fournier* 2969

Q-state Potts models in Hamiltonian field theory for $Q \geqslant 4$ in $(1+1)$ dimensions *C J Hamer* 2981

The d-dimensional Landsberg gas *J Dunning-Davies* 3005

A comment on the ideal relativistic Bose gas *J Dunning-Davies* 3013

Site bond percolation in ferromagnetic and antiferromagnetic Ising models: a renormalisation group approach *A Coniglio, F di Liberto and G Monroy* 3017

General Theory of Fields and Particles

The Hilbert–Schmidt cohomology for the Poincaré group *P Basarab-Horwath and L Polley* 3029

Non-singular cosmology as a result of a spontaneous breakdown of symmetries *S V Orlov* 3039

Instantons versus the low-temperature expansion *A C Davis and R J Rivers* 3047

A non-abelian Born–Infeld Lagrangian *T Hagiwara* 3059

Potential scattering of Dirac particles *B Thaller* 3067

A new method for scalar instanton spectrum investigation *G G Leptukh and A G Ushveridze* 3085

Macromolecules and Polymer Molecules

Wavevector dependence of the effective diffusion coefficient for solutions of macromolecules *P R Wills* 3093

Classical Electromagnetism

Diffractal echoes *M V Berry and T M Blackwell* 3101

Equations of state, Phase Equilibria and Phase Transitions

Essential singularity in the XY spin-1 chain with uniaxial anisotropy *R Jullien and P Pfeuty* 3111

COMMENT

On the method of Chan and Lu for Abel's integral equation *R S Anderssen and F R de Hoog* 3117

ADDENDUM

Addendum to 'The axial gauge for gravity' *R Delbourgo* 3123

NO 12 DECEMBER 1981

LETTERS TO THE EDITOR

Comparison of classical and quantal spectra for a totally bound potential *R A Pullen and A R Edmonds* L477

A new treatment of enclosed quantum mechanical systems *F M Fernández and E A Castro* L485

On the $x^2+\lambda x^2/(1+gx^2)$ interaction *V S Varma* L489

The velocity autocorrelation function of an overdamped Brownian system with hard-core interaction *S Hanna, W Hess and R Klein* L493

Fluctuation-induced second-order phase transitions *F Fucito and G Parisi* L499

On the range of validity of the $6-\varepsilon$ expansion for percolation *F Fucito and G Parisi* L507
Differential formulation of the renormalisation group in the large-n limit *G Busiello, L De Cesare and I Rabuffo* L513
The Gross–Neveu model: dynamical symmetry breaking at a Kosterlitz–Thouless phase transition *M C Ogilvie* L519
The Ising model in a random field: supersymmetric surface fluctuations and their implications in three dimensions *H S Kogon and D J Wallace* L527
On phase separation in the generalised spherical model *N Angelescu, M Bundaru and G Costache* L533

PAPERS

Mathematical Methods in Physics

The polynomial spectral problem of arbitrary order: A general form of the integrable equations and Bäcklund transformations *B G Konopelchenko* 3125
Unique labelling schemes for local modes in lattices *D J Newman* 3143
Intermittency in the presence of noise *J-P Eckmann, L Thomas and P Wittwer* 3153
Comparison between the projection operator and continued fraction approaches to perturbation theory *R I Jackson and S Swain* 3169

Classical and Quantum Physics: Mechanics and Fields

On the stability of the motion of uncharged dipoles *E H Lemke* 3181
Hydrogen atom in a strong magnetic field: on the existence of the third integral of motion *M Robnik* 3195
Unified kinematic of braydons and tachyons in six-dimensional space–time *M Pâvsic* 3217
The path-dependent electrodynamics of systems of bound charges: Lagrangian formulation and canonical relations *J Fiutak and M Żukowski* 3229
Geometrical description of quantal state determination *I D Ivanović* 3241

Relativity and Gravitation

Two-soliton solutions of the Ernst equation *J Gruszczak* 3247

Statistical Physics and Thermodynamics

Corrections to leading singularities in systems at the upper critical dimension *H S Kogon* 3253
The self-avoiding domain problem and generalised Potts models *H N V Temperley* 3261
Discrete physical systems *D S McKenzie* 3267
Pairing transition of a one-dimensional classical plasma *H Schulz* 3277
Observation of a long-time tail in Brownian motion *G L Paul and P N Pusey* 3301
The 2D transverse Ising model at $T = 0$: A finite-size rescaling transformation approach *R R dos Santos, L Sneddon and R B Stinchcombe* 3329
The renormalisation group and global $G \times G'$ theories about four dimensions *R D Pisarski and D L Stein* 3341
Renormalisation group calculations of the critical exponents of the n-vector model with a free surface *J Reeve and A J Guttmann* 3351

Equations of State, Phase Equilibria and Phase Transitions

Scaling properties of the entropy of polymer solutions *D J Elderfield* 3367

Physical Chemistry

Singularities in the kinetics of coagulation processes *F Leyvraz and H R Tschudi* 3389

COMMENTS

On the Wu–Yang potentials for the Dirac monopole *M Crampin* 3407
Two-fluid picture of the SK model of a spin glass *M Gabay and T Garel* 3411

SUBJECT INDEX, Vol 14 3417
AUTHOR INDEX (with titles), Vol 14 3438

Subject index

The 1981 subject index is based on the ICSU/AB International Classification for Physics; articles are listed, as appropriate, under one or more of the following headings:

00.00 **GENERAL**

02.00 MATHEMATICAL METHODS IN PHYSICS
- 02.10 Algebra, set theory, and graph theory
- 02.20 Group theory
- 02.30 Function theory, analysis
- 02.40 Geometry, differential geometry, and topology
- 02.50 Probability theory, stochastic processes, and statistics
- 02.60 Numerical approximation and analysis
- 02.70 Computational techniques
- 02.90 Other topics in mathematical methods in physics

03.00 CLASSICAL AND QUANTUM PHYSICS; MECHANICS AND FIELDS
- 03.20 Classical mechanics of discrete systems: general mathematical aspects
- 03.30 Special relativity
- 03.40 Classical mechanics of continuous media: general mathematical aspects
- 03.50 Classical field theory
- 03.65 Quantum theory; quantum mechanics
- 03.70 Theory of quantised fields
- 03.80 General theory of scattering

04.00 RELATIVITY AND GRAVITATION
- 04.20 General relativity
- 04.30 Gravitational waves and radiation; theory
- 04.40 Continuous media; electromagnetic and other mixed gravitational systems
- 04.50 Unified field theories and other theories of gravitation
- 04.60 Quantum theory of gravitation
- 04.80 Experimental tests of general relativity and observations of gravitational radiation
- 04.90 Other topics in relativity and gravitation

05.00 STATISTICAL PHYSICS AND THERMODYNAMICS
- 05.20 Statistical mechanics
- 05.30 Quantum statistical mechanics
- 05.40 Fluctuation phenomena, random processes, and Brownian motion
- 05.50 Lattice theory and statistics; Ising problems
- 05.60 Transport processes, theory
- 05.70 Thermodynamics
- 05.90 Other topics in statistical physics and thermodynamics

02.00 MATHEMATICAL METHODS IN PHYSICS

Solitary waves in a two-dimensional diatomic lattice *G Behnke and H Büttner* AL113

A simple algorithm for the calculation of moments of the density of states in a one-dimensional random binary alloy *R Ramírez and M Orszag* AL117

Non-bijective canonical transformations in quantum mechanics *J Deenen* AL273

Type-D space–times with a Killing tensor *M Demiański and M Francaviglia* A173

Orthogonal polynomials in transport theories *J S Dehesa* A297

Exact solution of the Schrödinger and Klein–Gordon equations for generalised Hulthén potentials *M Znojil* A383

Thermodynamics of 1D soliton-bearing Hamiltonians: Transfer integral structure and correlation functions *A R Bishop* A883

Renormalised perturbation series *J Killingbeck* A1005

On the finite difference between divergent sum and integral *G Barton* A1009

A Fourier series approach to Burgers' equation *J Caldwell and P Wanless* A1029

A note on the stochastic lattice-gas model *P Vanheuverzwijn* A1149

Nonlinear mode phenomenology for sine-Gordon breather excitations *A R Bishop* A1417

Wave propagation and Thom's theorem *A D Gorman, R Wells and G N Fleming* A1519

Renormalised perturbation theory of normal systems *C J Lambert and W E Hagston* A1533

Orthogonal subspaces in an iterative method for the diagonalisation of Hermitian operators *G Bozzolo, M T Martin and A Plastino* A1601

Large-N saddle points *C Aragão de Carvalho and V A Fateev* A1925

Some exact and approximate solutions of the nonlinear Boltzmann equation with applications to aerosol coagulation *M M R Williams* A2073

Classical analogy of the concept of collective variables *L P Brito and C A Sousa* A2239

Master equation derivation of quantum regression theorem *S Swain* A2577

The perturbed ladder operator method. Perturbed eigenvalues and eigenfunctions from finite difference considerations *N Bessis, G Bessis and G Hadinger* A2839

02.10 Algebra, set theory, and graph theory

Measurement-theory approach to an internal energy function *T Nakagomi* A303

Diagram and superfield techniques in the classical superalgebras *P H Dondi and P D Jarvis* A547

Oscillator Wigner functions *G S Pogosyan, Ya A Smorodinsky and V M Ter-Antonyan* A769

The Umezawa–Visconti relation for first-order field equations *W Cox* A2459

Discrete physical systems *D S McKenzie* A3267

02.20 Group theory

The Poincaré group, the Dirac monopole and photon localisation *H Bacry* AL73

The existence of energy gaps for three-dimensional systems without long-range order *A Nenciu and G Nenciu* AL109

On the dynamical group of the charge–monopole system *A O Barut* AL267

Kinematic groups and dimensional analysis *J F Cariñena, M A del Olmo and M Santander* A1

Natural labelling schemes for simple roots and irreducible representations of exceptional Lie algebras *R C King and A H A Al-Qubanchi* A15

The Weyl groups and weight multiplicities of the exceptional Lie groups *R C King and A H A Al-Qubanchi* A51

Kronecker products of representations of exceptional Lie groups *R C King* A77

Clebsch–Gordan coefficients for the permutation group *G G Sahasrabudhe, K V Dinesha and C R Sarma* A85

Spinors and related tensors invariant under E(3) and its subgroups *J Beckers and V Hussin* A317

The symmetric group: branching rules, products and plethysms for spin representations *L Dehuai and B G Wybourne* A327

Reduced matrix elements of a coupled tensor in a subgroup basis *K Bharathi* A349

Stable states of a relativistic bilocal stochastic oscillator: a new quark-lepton model *N C Petroni, Z Marić, Dj Živanović and J P Vigier* A501

Correction to 'Invariant volumes of compact groups' *M S Marinov* A543

Permutation group and interacting subsystems of particles *C R Sarma* A565

Irreducible representations of the symmetry groups of polymer molecules II *I B Božović and M Vujičić* A777

Highest-weight representations of the sl($n+1$, C) algebras: maximal representations *Č Burdík, M Havlíček and P Exner* A1039

Subgroups of weak-direct products and magnetic axial point groups *M Damnjanović and M Vujičić* A1055
Addition of an arbitrary number of different angular momenta *V V Mikhailov* A1107
On the admissibility of repeated irreducible representations in barnacle-free unique-spin unique-mass relativistic wave equations *P M Mathews, B Vijayalakshmi, M Seetharaman and Y Takahashi* A1193
On the structure of equations integrable by the arbitrary-order linear spectral problem *B G Konopelchenko* A1237
Clebsch–Gordan coefficients for the corepresentations of Shubnikov point groups: II. Cubic groups *J N Kotzev and M I Aroyo* A1543
Regular products of the single-hook characters of the unitary group *N G El-Sharkaway, H A Jahn and R C King* A1557
Asymptotic solutions of time dependent anharmonic oscillator equation *M-P Moraux, E Fijalkow and M R Feix* A1611
Extended Lorentz invariance and field theory *I M Benn and R W Tucker* A1745
Supersymmetry, the Barducci–Casalbuoni–Lusanna Lagrangian, and the Weyl group in d dimensions *D J Almond* A1761
Irreducible representations of the symmetry groups of polymer molecules: III. Consequences of time-reversal symmetry *I Božović and N Božović* A1825
The alternating group: branching rules, products and plethysms for ordinary and spin representations *L Dehuai and B G Wybourne* A1835
On Hamiltonian structure of integrable equations under the group and matrix reductions *B G Konopelchenko and V G Mokhnachev* A1849
Dynamical group model of superfluid helium three *A I Solomon* A2177
Non-canonical subgroup restrictions of the unitary group $U(nm)\downarrow U(n)\otimes U(m)$ *G G Sahasrabudhe, K V Dinesha and C R Sarma* A2189
Symmetrised powers of rotation group representations *R C King, L Dehuai and B G Wybourne* A2509
The polynomial spectral problem of arbitrary order: a general form of the integrable equations and Bäcklund transformations *B G Konopelchenko* A3125
Unique labelling schemes for local modes in lattices *D J Newman* A3143

02.30 Function theory, analysis

On the reducibility of the Voigt functions *H Exton* AL75
Derivation of the Onsager–Machlup function by a minimisation of the Kullback–Leibler entropy *H Ito* AL385
Theorem relating to the development of a reflection coefficient in terms of a small parameter *J Heading* A357
Complementary variational principles and variational–iterative principles *B L Burrows and A J Perks* A797
Irregular scattering functions *M Kolsrud* A821
Some integrals involving associated Legendre functions and Gegenbauer polynomials *M L Laursen and K Mita* A1065
A theorem on the separation of a system of coupled differential equations *Cao Xuan Chuan* A1069
Nonlinear differential–difference equations, associated Bäcklund transformations and Lax technique *M Bruschi and O Ragnisco* A1075
Nonlinear differential difference equations as Bäcklund transformations *D Levi* A1083
On the structure of equations integrable by the arbitrary-order linear spectral problem *B G Konopelchenko* A1237
The generalised Brillouin theorem *J Pian and C S Sharma* A1261
Constraints on physical amplitudes derived from a modified analytic interpolation problem *I Caprini* A1271
On the equivalence between the impact parameter and transverse momentum space formalisms for the Drell–Yan process *H F Jones and J Wyndham* A1457
Asymptotic expressions for the widths of low-lying energy bands in one-dimensional periodical potentials *T P Grozdanov and S Yu Slavyanov* A1513
Integrable three-dimensional lattices *D Levi, L Pilloni and P M Santini* A1567
Asymptotic solutions of an elliptic equation system on a Riemannian manifold concentrated in the vicinity of a phase trajectory *V S Buldyrev and V E Nomofilov* A1577
On Hamiltonian structure of integrable equations under the group and matrix reductions *B G Konopelchenko and V G Mokhnachev* A1849
Asymptotic forms of convolved line profiles *N M Froment, P M Radmore and G Stephenson* A2201
Fourier transforms of distributions and associated Feynman integrals *H P Berg and J Tarski* A2207
Applications of non-standard analysis to relativistic quantum mechanics: I *C E Francis* A2539

02.40 Geometry, differential geometry, and topology
Lie algebra projections and the kinematics of collective motions *P Gulshani* A97
New topological indices in SO(3) Einstein–Yang–Mills theory *R F Picken* A471
The geometrical structure of a complexified theory of gravitation *G Kunstatter and R Yates* A847
Harmonic maps and self-dual SU(3) gauge fields *B C Xanthopoulos* A1445
Singularities of plane curves which occur as singular sections of the bifurcation sets of the cuspoid catastrophes *F J Wright* A1587
Modelling critical behaviour in terms of catastrophe theory and fractal lattices *K Keller* A1719
A geometrical definition of spinors from 'orientations' in three-dimensional space leading to a linear spinor visualisation *R Kjellander* A1863
The perturbation of some exactly soluble problems in wave mechanics by the method of potential envelopes *R L Hall and M Satpathy* A2645
Four-dimensional kinks *G S Whiston* A2861
On the Wu–Yang potentials for the Dirac monopole *M Crampin* A3407

02.50 Probability theory, stochastic processes, and statistics
Anisotropic bond percolation by position-space renormalisation group *H Nakanishi, P J Reynolds and S Redner* A855
A stochastic model for the motion of two relativistic particles *Kh Namsrai* A1307
Intermittency in the presence of noise *J-P Eckmann, L Thomas and P Wittwer* A3135

02.60 Numerical approximation and analysis
An approximate analytical treatment of the E⊗ε Jahn–Teller effect *H Barentzen, G Olbrich and M C M O'Brien* A111
Modification of the extended (2×2) algorithm by a variational principle *K G Kreuzer, H G Miller and W A Berger* A763
Complementary variational principles and variational–iterative principles *B L Burrows and A J Perks* A797
The anharmonic oscillator: perturbation series for cubic and quartic energy distortion *J E Drummond* A1651
Improved continued fraction treatment of the one-dimensional scattering problem *Ph Lambin and J P Vigneron* A1815
Specific heats of classical spin systems and inhomogeneous differential approximants *J-H Chen and M E Fisher* A2553

02.70 Computational techniques
An axisymmetric stationary solution of Einstein's equations calculated by computer *C Hoenselaers* AL427
Matrix mutual orthogonality and parameter independence *D J Newman* AL429
On the stability of the solution of Abel's integral equation *C K Chan and P Lu* A575
Scaling studies of percolation phenomena in systems of dimensionality two to seven: II. Equation of state *H Nakanishi and H E Stanley* A693
Position-space renormalisation group for isolated polymer chains *S Redner and P J Reynolds* A2679
On the method of Chan and Lu for Abel's integral equation *R S Anderssen and F R de Hoog* A3117

02.90 Other topics in mathematical methods in physics
Method for calculation of non-Gaussian generating functions in lattice models *W Jeżewski* AL239
A method of integration over matrix variables: II *S Chadha, G Mahoux and M L Mehta* A579
Complementary variational principles and variational–iterative principles *B L Burrows and A J Perks* A797
Eighth rank isotropic tensors and rotational averages *D L Andrews and W A Ghoul* A1281
Asymptotic solutions of time dependent anharmonic oscillator equation *M-P Moraux, E Fijalkow and M R Feix* A1611
On the avoidance of cancellations in the matrix moment problem *R R Whitehead and A Watt* A1887
Symmetries and differential equations *J (R) Meinhardt* A1893
An asymmetric form of the discrete Schrödinger equation with application to the inverse tunnelling problem *M Hron and M Razavy* A2215
The equality of multiple integrals in the series development of a reflection coefficient for waves governed by a general linear differential equation *J Heading* A2881
Comparison between the projection operator and continued fraction approaches to perturbation theory *R I Jackson and S Swain* A3169

03.00 CLASSICAL AND QUANTUM PHYSICS: MECHANICS AND FIELDS
Improved energy lower bound for the *N*-fermion system *E B Balbutsev* A369

On the energy shape dependences of ellipsoidal leptodermous systems *B Remaud and G Royer* A2897
On the stability of the motion of uncharged dipoles *E H Lemke* A3181
On the Wu–Yang potentials for the Dirac monopole *M Crampin* A3407

03.20 Classical mechanics of discrete systems: general mathematical aspects
Band to band hopping in one-dimensional maps *S J Shenker and L P Kadanoff* AL23
On the Lenz vector *R L Schafir* AL269
Higher-order Noether symmetries and constants of the motion *W Sarlet and F Cantrijn* A479
On the Lie symmetries of the classical Kepler problem *G E Prince and C J Eliezer* A587
On the freedom of choice of the action-angle variables for Hamiltonian systems *M Antonowicz* A1099
A stochastic model for the motion of two relativistic particles *Kh Namsrai* A1307
The average Riemann curvature of conservative systems in classical mechanics *J F C van Velsen* A1621
Symmetries, first integrals and the inverse problem of Lagrangian mechanics *W Sarlet* A2227
Classical analogy of the concept of collective variables *L P Brito and C A Sousa* A2239
On the differential geometry of the Euler–Lagrange equations, and the inverse problem of Lagrangian dynamics *M Crampin* A2567
'Proper time' and the Dirac equation *J R Ellis* A2917
Hydrogen atom in a strong magnetic field: on the existence of the third integral of motion *M Robnik* A3195

03.30 Special relativity
Once more on multi-dimensional time *J Strnad* AL433
Rotating fields and particle-like states of electron–positron systems *P F Browne* A597
Exact solutions of the motion equations for a classical spinning particle with radiation damping *R Gambini and A Trias* A621
A stochastic model for the motion of two relativistic particles *Kh Namsrai* A1307
Comments on the Letter of Strnad concerning multidimensional time *E A B Cole* A1821
'Proper time' and the Dirac equation *J R Ellis* A2917
Unified kinematics of bradyons and tachyons in six-dimensional space–time *M Pavšič* A3217

03.40 Classical mechanics of continuous media: general mathematical aspects
The velocity dependence of inter-soliton forces *G A Ringwood* AL199
Prolongation structure and linear eigenvalue equations for Einstein–Maxwell fields *D Kramer and G Neugebauer* AL333
Experimental observations on the resonant amplitude modulation of Mössbauer gamma rays *L T Tsankov* A275
Non-stationary thermodynamics and wave propagation in heat conducting viscous fluids *F Bampi and A Morro* A631
Quaternion quantum mechanics as a true 3+1-dimensional theory of tachyons *J Souček* A1629

03.50 Classical field theory
On the conformal covariant energy–momentum tensor *B-W Xu* AL97
Quaternion quantum mechanics as a true 3+1-dimensional theory of tachyons *J Souček* A1629
The path-dependent electrodynamics of systems of bound charges: Lagrangian formulation and canonical relations *J Plutak and M Żukowski* A3229

03.65 Quantum theory; quantum mechanics
On certain local observables generated by the momenta *K McFarlane and K-K Wan* AL1
Towards electrodynamical models of particles *P F Browne* AL11
A note on quasi-periodic states *F Gesztesy and H Mitter* AL79
The maximal kinematical group of the general Schrödinger equation *B-W Xu* AL123
On the general expression of the conformally covariant energy–momentum tensor *B-W Xu* AL125
Exact solutions for anharmonic oscillators *G P Flessas* AL209
Non-bijective canonical transformations in quantum mechanics *J Deenen* AL273
An exact solution of the Schrödinger equation for a multiterm potential *G P Flessas and A Watt* AL315
Comparison of classical and quantal spectra for the Hénon–Heiles potential *R A Pullen and A R Edmonds* AL319
On the $x^2+\lambda x^2/(1+gx^2)$ interaction *V S Varma* AL489
Comparison of classical and quantal spectra for a totally bound potential *R A Pullen and A R Edmonds* AL447
A new treatment of enclosed quantum mechanical systems *F M Fernández and E A Castro* AL485
Lie algebra projectors and the kinematics of collective motions *P Gulshani* A97

Aspects of a representation of quantum theory in terms of classical probability theory by means of integration in Hilbert space *A Bach* A125

Quantum bounds on the information capacity of narrow-band free-space links without extraneous noise *W G Chambers* A133

On Klauder's pseudo-free oscillator *B S Kay* A155

Reduced matrix elements of a coupled tensor in a subgroup basis *K Bharathi* A349

A harmonic oscillator perturbed by the potential $\lambda x^2/(1+gx^2)$ *K V Bhagwat* A377

Scattering states for a finite chain in one dimension *M Cvetič and L Pičman* A379

Exact solution of the Schrödinger and Klein–Gordon equations for generalised Hulthén potentials *M Znojil* A383

Trajectories and spin motion of massive spin-$\frac{1}{2}$ particles in gravitational fields *J Audretsch* A411

Comments on 'On a proposed new test of Heisenberg's principle' *D Home and S Sengupta* A539

A method of integration over matrix variables: II *S Chadha, G Mahoux and M L Mehta* A579

Born expansions for Coulomb-type interactions *F Gesztesy and B Thaller* A639

Some remarkable spin-$\frac{1}{2}$-like algebraic properties of spin-$\frac{1}{2}$ matrices *F Eulálio, A dos Santos and J Jayaraman* A745

Modification of the extended (2×2) algorithm by a variational principle *K G Kreuzer, H G Miller and W A Berger* A763

Remarks on Turschner's eigenvalue formula *M S Ashbaugh and J D Morgan III* A809

Irregular scattering functions *M Kolsrud* A821

General relativistic gravitational field effects on superfluid phase interference devices *A Widom, G Megaloudis, J E Sacco and T D Clark* A841

Renormalised perturbation series *J Killingbeck* A1005

Addition of an arbitrary number of different angular momenta *V V Mikhailov* A1107

A non-relativistic reduction of the Dirac equation in the free-particle basis *J Potvin* A1117

The spreading of wavepackets in quantum mechanics *M Andrews* A1123

Quantum mechanical ground states, nonlinear Schrödinger equations and linked cluster expansions *L P Kadanoff and M Kohmoto* A1291

A stochastic model for the motion of two relativistic particles *Kh Namsrai* A1307

Non-linear dynamics of the fermion–boson model: interference between revivals and the transition to irregularity *H-I Yoo, J J Sanchez-Mondragon and J H Eberly* A1383

Renormalised perturbation theory of normal systems *C J Lambert and W E Hagston* A1533

Orthogonal subspaces in an iterative method for the diagonalisation of Hermitian operators *G Bozzolo, M T Martin and A Plastino* A1601

Quaternion quantum mechanics as a true 3+1-dimensional theory of tachyons *J Souček* A1629

A new approach to the eigenvalue problem in quantum mechanics: convergent perturbation theory for rising potentials *A V Turbiner* A1641

The anharmonic oscillator: perturbation series for cubic and quartic energy distortion *J E Drummond* A1651

Renormalised perturbation theory of ordered systems *W E Hagston and C J Lambert* A1915

Large-*N* saddle points *C Aragão de Carvalho and V A Fateev* A1925

Comments on Robinson's thought experiment testing Heisenberg's principle *I Singh* A2171

Fourier transforms of distributions and associated Feynman integrals *H P Berg and J Tarski* A2207

Classical analogy of the concept of collective variables *L P Brito and C A Sousa* A2239

The redshift of hydrogen lines in a strong magnetic field *S H Patil* A2251

A simple nonlinear dissipative quantum evolution equation *N Gisin* A2259

Harmonic oscillator with exponentially decaying mass *R K Colegrave and M S Abdalla* A2269

A gravitational analogue of the Aharonov–Bohm effect *L H Ford and A Vilenkin* A2353

Master equation derivation of quantum regression theorem *S Swain* A2577

Completely integrable *N*-body quantum systems in three dimensions *A O Barut and Y Kitagawara* A2581

The quantisation and measurement of momentum observables: II *K-K Wan and K McFarlane* A2595

Algebraical confinement of coloured states *J Rembieliński* A2609

A lower bound on the information capacity of a quantum narrow-band free-space link *W G Chambers* A2625
Second quantisation of the nonlinear Schrödinger equation *B Davies* A2631
The perturbation of some exactly soluble problems in wave mechanics by the method of potential envelopes *R L Hall and M Satpathy* A2645
'Proper time' and the Dirac equation *J R Ellis* A2917
Path-integral forms for the Klein–Gordon wavefunction *F G Krausz* A2911
Schrödinger lumps *S M Roy and V Singh* A2927
Comparison between the projection operator and continued fraction approaches to perturbation theory *R I Jackson and S Swain* A3169
Geometrical description of quantal state determination *I D Ivanović* A3241

03.70 Theory of quantised fields

Estimates of the A^2-term in the interaction of matter with radiation *P Pfeifer* AL129
Surface terms in higher derivative gravity *T S Bunch* AL139
A quantum Hamiltonian approach to the two-dimensional axial next-nearest-neighbour Ising model *M N Barber and P M Duxbury* AL251
Difficulties with the inverse scattering transform method in quantum field theory *B Davies* A145
On Klauder's pseudo-free oscillator *B S Kay* A155
A method of integration over matrix variables: II *S Chadha, G Mahoux and M L Mehta* A579
Alternative renormalisation in the Kondo problem *P Lloyd, A W Mirtschin and D M Cragg* A659
The phases of two-dimensional spin and four-dimensional gauge systems with $Z(N)$ symmetry *F C Alcaraz and R Köberle* A1169
On bosonisation in (1+1) dimensions *H Aratyn* A1313
On the uniqueness of the Segal quantisation of linear Bose systems *F Gallone and A Sparzani* A1341
Quaternion quantum mechanics as a true 3+1-dimensional theory of tachyons *J Souček* A1629
Improved continued fraction treatment of the one-dimensional scattering problem *Ph Lambin and J P Vigneron* A1815
The generalised drone-fermion method and the semi-invariant approach for spin systems *G C Psaltakis and M G Cottam* A2149
Critical exponents for the percolation problem and the Yang–Lee edge singularity *O F de Alcantara Bonfim, J E Kirkham and A J McKane* A2391

03.80 General theory of scattering

Electron diffraction by a cylindrical capacitor *W L Schaich* A165
Irregular scattering functions *M Kolsrud* A821
The density operator approach to scattering theory *K L Sebastian* A1233
On the Hilbert-space approach to classical time delay *D Bollé and J D'Hondt* A1663
Nonlinear scattering processes in the presence of a quantised radiation field: II. Relativistic treatment *J Bergou and S Varró* A2281
e–e scattering in the presence of an external field *J Bergou, S Varró and M V Fedorov* A2305

04.00 RELATIVITY AND GRAVITATION

The asymptotic nature of isolated systems *M Ludvigsen* AL27
The η invariant for charged spinors in Taub–NUT *C N Pope* AL133
Expansion coefficient of heat kernel of Laplacian operator in Riemann–Cartan space *T Kimura* AL329
The positivity of the Bondi mass *M Ludvigsen and J A G Vickers* AL389
Type-D space–times with a Killing tensor *M Demiański and M Francaviglia* A173
Number and density of percolating clusters *C M Newman and L S Schulman* A1735
New two- and three-parameter solutions of the MPST equation *K D Krori, T Chaudhury and R Bhattacharjee* A2317
Charge as a manifestation of (4+1) space–time *D J Booth* A2325
Space–time topology and spontaneous symmetry breaking *C J Isham* A2943

04.20 General relativity

Exact solution for vacuum Bianchi type III model with a cosmological constant *A Moussiaux, P Tombal and J Demaret* AL277
Prolongation structure and linear eigenvalue equations for Einstein–Maxwell fields *D Kramer and G Neugebauer* AL333
The localisation of energy in general relativity: II *F I Cooperstock, R S Sarracino and S Ş Bayin* A181
Some Einstein spaces and their global properties *S T C Siklos* A395

Trajectories and spin motion of massive spin-$\frac{1}{2}$ particles in gravitational fields *J Audretsch* A411
General relativistic gravitational field effects on superfluid phase interference devices *A Widom, G Megaloudis, J E Sacco and T D Clark* A841
Exact spatially inhomogeneous cosmologies *J Wainwright* A1131
The Petrov type of a static vacuum space–time near a normal-dominated singularity *J D McCrea* A1351
Separation of variables in Einstein spaces: I. Two ignorable and one null coordinate *C P Boyer, E G Kalnins and W Miller Jr* A1675
Complete description of photon trajectories in the Kerr–Newman space–time *M Calvani and R Turolla* A1931
Determination of the metric tensor from components of the Riemann tensor *C B G McIntosh and W D Halford* A2331
A characteristic initial-value problem approach to the formation of inhomogeneities in the early universe *D S Chellone* A2339
World vectors, Jacobi vectors and Jacobi one-forms on a manifold with a linear symmetric connection *R Schattner and M Trümper* A2345
A gravitational analogue of the Aharonov–Bohm effect *L H Ford and A Vilenkin* A2353
Homogeneous radiation-filled universe in general scalar tensor theory *A Banerjee and N O Santos* A2829
Four-dimensional kinks *G S Whiston* A2861
Two-soliton solutions of the Ernst equation *J Gruszczak* A3247

04.30 Gravitational waves and radiation: theory

Gravitational wave dispersion in condensed matter systems *A Widom, G Megaloudis, T D Clark and R J Prance* AL213
Gravitational radiation resistance, radiation damping and field fluctuations *G Schäfer* A677
Axial vacuum symmetry of the unified gauge theories with the gravitational mechanism of instability *V M Nikolaenko* A1685
Path integral and gravitational radiation damping *G. Schäfer and H Dehnen* A2359
Linear approximation in a new theory of gravity *R B Mann and J W Moffat* A2367
Multipole moments in general relativity *D G Willmer* A2653

04.40 Continuous media; electromagnetic and other mixed gravitational systems

Nonlinear effects of gravitational and electromagnetic radiation on the propagation of light *B Linet* A2673
Non-singular cosmology as a result of a spontaneous breakdown of symmetries *S V Orlov* A3039

04.50 Unified field theories and other theories of gravitation

Stability of the Minkowski vacuum in the renormalised semiclassical theory of gravity *S Randjbar-Daemi* AL229
The geometrical structure of a complexified theory of gravitation *G Kunstatter and R Yates* A847
Axial vacuum symmetry of the unified gauge theories with the gravitational mechanism of instability *V M Nikolaenko* A1685
Vacuum stress tensor for a slightly squashed Einstein universe *R Critchley and J S Dowker* A1943
Solutions of the f–g field equations *M Gürses* A1957
Field of a charged particle in Brans–Dicke theory of gravitation *D R K Reddy and V U M Rao* A1973
Linear approximation in a new theory of gravity *R B Mann and J W Moffat* A2367
Homogeneous radiation-filled universe in general scalar tensor theory *A Banerjee and N O Santos* A2829
A gravitational model for a matter-free torsion ball *T Dereli and R W Tucker* A2957

04.60 Quantum theory of gravitation

Surface terms in higher derivative gravity *T S Bunch* AL139
The axial gauge for gravity *R Delbourgo* AL235
The conformal anomaly and the renormalisation group *T S Bunch* AL281
Trajectories and spin motion of massive spin-$\frac{1}{2}$ particles in gravitational fields *J Audretsch* A411
New topological indices in SO(3) Einstein–Yang–Mills theory *R F Picken* A471
Gravitational radiation resistance, radiation damping and field fluctuations *G Schäfer* A677
On-shell supercurrent multiplet for supergravity in six dimensions *R Puzalowski* A1977
Path integral and gravitational radiation damping *G Schäfer and H Dehnen* A2359
Addendum to 'The axial gauge for gravity' *R Delbourgo* A3123

04.80 Experimental tests of general relativity and observations of gravitational radiation

The Petrov type of a static vacuum space–time near a normal-dominated singularity *J D McCrea* A1351

04.90 Other topics on relativity and gravitation

Solutions of the f–g field equations *M Gürses* A1957

05.00 STATISTICAL PHYSICS AND THERMODYNAMICS

The phases of two-dimensional spin and four-dimensional gauge systems with $Z(N)$ symmetry *F C Alcaraz and R Köberle* A1169

H theorems in statistical fluid dynamics *G F Carnevale, U Frisch and R Salmon* A1701

Mean field theory of percolation with application to surface effects *K De'Bell and J W Essam* A1993

Testing field-theoretical methods on a classical cubic equation with stochastic driving *S Gauthier, M-E Brachet and J-D Fournier* A2969

05.20 Statistical mechanics

Single-scaling-field approach for an isolated polymer chain *S Redner and P J Reynolds* AL55

Localisation–delocalisation transition in a solid-on-solid model with a pinning potential *T W Burkhardt* AL63

Method for calculation of non-Gaussian generating functions in lattice models *W Jeżewski* AL239

Polymer statistics on a Cayley tree *S L A de Queiroz* AL339

A new mapping between self-avoiding walks and the $n \to 0$ limit *P D Gujrati* AL345

The Ising model in a random field; supersymmetric surface fluctuations and their implications in three dimensions *H S Kogon and D J Wallace* AL527

Comment on Parisi's equation for the SK model for spin glasses *B Duplantier* A283

A numerical study of the general Rayleigh's piston model *J A Barker, M R Hoare and S Raval* A423

Scaling studies of percolation phenomena in systems of dimensionality two to seven: II. Equation of state *H Nakanishi and H E Stanley* A693

Renormalisation group study of polyelectrolyte chains *G Jug and G Rickayzen* A1357

Auxiliary sites in the RISM approximation for molecular fluids *P T Cummings, C G Gray and D E Sullivan* A1483

Spin–spin correlation function in the high-temperature Villain model *R A Pelcovits* A1693

H theorems in statistical fluid dynamics *G F Carnevale, U Frisch and R Salmon* A1701

Master equation derivation of quantum regression theorem *S Swain* A2577

Position-space renormalisation group for isolated polymer chains *S Redner and P J Reynolds* A2679

A comparison of approximation methods for kinetic corrections to lineshape predictions *E A Johnson* A2705

Q-state Potts models in Hamiltonian field theory for $Q \geqslant 4$ in $(1+1)$ dimensions *C J Hamer* A2981

Corrections to leading singularities in systems at the upper critical dimension *H S Kogon* A3253

The self-avoiding domain problem and generalised Potts models *H N V Temperley* A3261

Discrete physical systems *D S McKenzie* A3267

Pairing transition of a one-dimensional classical plasma *H Schulz* A3277

05.30 Quantum statistical mechanics

Calculation of crossover exponent from Heisenberg to Ising behaviour using the fourth-order ϵ expansion *J E Kirkham* AL437

Higher-order Einstein relations for nonlinear charge transport *S A Hope, G Féat and P T Landsberg* A2377

Critical exponents for the percolation problem and the Yang–Lee edge singularity *O F de Alcantara Bonfim, J E Kirkham and A J McKane* A2391

The d-dimensional Landsberg gas *J Dunning-Davies* A3005

A comment on the ideal relativistic Bose gas *J Dunning-Davies* A3013

05.40 Fluctuation phenomena, random processes, and Brownian motion

Fokker–Planck dynamics of interacting Brownian particles *W Hess* AL145

Percolation and conduction in a random resistor-diode network *S Redner* AL349

The mechanism of stochastic resonance *R Benzi, A Sutera and A Vulpiani* AL453

Diffusivity and radius of random animals, percolation clusters and compact clusters *H Gould and K Holl* AL443

A numerical study of the general Rayleigh's piston model *J A Barker, M R Hoare and S Raval* A423

Anisotropic bond percolation by position-space renormalisation group *H Nakanishi, P J Reynolds and S Redner* A855

Non-linear dynamics of the fermion–boson model: interference between revivals and the transition to irregularity *H-I Yoo, J J Sanchez-Mondragon and J H Eberly* A1383

Orbital diamagnetism of a charged Brownian particle undergoing a birth–death process *A M Jayannavar and N Kumar* A1399
Observation of a long-time tail in Brownian motion *G L Paul and P N Pusey* A3301

05.50 Lattice theory and statistics; Ising problems

Phenomenological renormalisation of the self avoiding walk in two dimensions *B Derrida* AL5
Monte Carlo renormalisation-group approach to percolation on a continuum: test of universality *T Vicsek and J Kertész* AL31
Dilute Potts model, duality and site–bond percolation *F Y Wu* AL39
Computation of the critical exponents of percolation *F Fucito and E Marinari* AL85
q-state Potts models in d dimensions: Migdal–Kadanoff approximation *D Andelman and A N Berker* AL91
The Yang–Lee edge singularity by the phenomenological renormalisation group *K Uzelac and R Jullien* AL151
Cluster size distribution above the percolation threshold *T C Lubensky and A J McKane* AL157
Directed percolation: a finite-size renormalisation group approach *W Kinzel and J M Yeomans* AL163
Order propagation near the percolation threshold *R Pike and H E Stanley* AL169
The two-dimensional bond-diluted transverse Ising model at zero temperature *R R dos Santos* AL179
$Z(2)$ gauge model on fractal lattices *D Dhar* AL185
The Heisenberg antiferromagnetic chain *B Hu and C S Ting* AL189
Monte Carlo simulation of a model of a surfactant *D B Abraham and E R Smith* AL193
Monte Carlo study of the antiferromagnetic Potts model on frustrated lattices *G S Grest* AL217
Method for calculation of non-Gaussian generating functions in lattice models *W Jeżewski* AL239
Percolative phase transition without the appearance of an infinite network *F Delyon, B Souillard and D Stauffer* AL243
Series estimate of the exponent β for bond percolation on a simple cubic lattice *D S Gaunt, S G Whittington and M F Sykes* AL247
A quantum Hamiltonian approach to the two-dimensional axial next-nearest-neighbour Ising model *M N Barber and P M Duxbury* AL251
Charge neutrality and boundary conditions in the classical Coulomb lattice gas *E R Smith* AL257
Percolation properties of a three-dimensional random resistor-diode network *S Redner and A C Brown* AL285
Continuum percolation in two dimensions: Monte Carlo tests of scaling and universality for non-interacting discs *E T Gawlinski and H E Stanley* AL291
A new mapping between self-avoiding walks and the $n \to 0$ limit *P D Gujrati* AL345
Lower-dimensional defect transitions in self-avoiding walks and percolation *H Nakanishi* AL355
Confluent singularities in directed bond percolation *J Adler, M Moshe and V Privman* AL363
Binding of a domain wall in the planar Ising ferromagnet *D B Abraham* AL369
Virial expansion of a two-dimensional polymer chain: cancellation of logarithmic terms *C Domb and P J Ratcliffe* AL373
Metastable states in the solvable spin glass model *A J Bray and M A Moore* AL377
Surface roughening for two-dimensional percolation at $p = 1$ *H Franke* AL393
A Potts model with infinitely degenerate ground state *W Kinzel, W Selke and F Y Wu* AL399
Directed percolation: pseudo-correlation length *W Klein and W Kinzel* AL405
Remark on percolative phase transitions without infinite network *W Klein and D Stauffer* AL413
Diffusivity and radius of random animals, percolation clusters and compact clusters *H Gould and K Holl* AL443
Series expansion studies of directed percolation: estimates of the correlation length exponents *J W Essam and K De'Bell* AL459
Two-dimensional percolation: logarithmic corrections to the critical behaviour from series expansions *J Adler and V Privman* AL463
Fluctuation-induced second-order phase transitions *F Fucito and G Parisi* AL499
On the range of validity of the $6-\varepsilon$ expansion for percolation *F Fucito and G Parisi* AL507
Differential formulation of the renormalisation group in the large-n limit *G Busiello, L De Cesare and I Rabuffo* AL513
The pseudo-free 128 vertex model *S Samuel* A191
The correlation functions in the 32-vertex model *S Samuel* A211

Averages in restricted random walks *C Domb* A219
Correlation function of one-dimensional Ising model with power-law potential *A K Bassiouny* A227
Perimeter polynomials for bond percolation processes *M F Sykes, D S Gaunt and M Glen* A287
Surface critical exponents for self-avoiding walks on the tetrahedral lattice *T Ishinabe and S G Whittington* A439
Optimal real-space renormalisation *T A Witten Jr and J J Prentis* A447
Infinite- and finite-spin Ising chains at low temperatures *M R Davies, C K Harris and R B Stinchcombe* A459
Semi-infinite ϕ^4 systems: ε expansions for susceptibility exponents *J S Reeve and A J Guttmann* A687
Critical point of a triangular Potts model with two- and three-site interactions *F Y Wu and R K P Zia* A721
Anisotropic bond percolation by position-space renormalisation group *H Nakanishi, P J Reynolds and S Redner* A855
The Kikuchi approximation: a reformulation and application to the percolation problem *A P Young* A873
A note on the stochastic lattice-gas model *P Vanheuverzwijn* A1149
The square-lattice Ising model with first and second neighbour interactions *J Oitmaa* A1159
Quantum mechanical ground states, nonlinear Schrödinger equations and linked cluster expansions *L P Kadanoff and M Kohmoto* A1291
One-dimensional models with $1/r^2$ interactions *J L Cardy* A1407
Modelling critical behaviour in terms of catastrophe theory and fractal lattices *K Keller* A1719
Number and density of percolating clusters *C M Newman and L S Schulman* A1735
A renormalisation group approach to the entropy of a single polymer *D J Elderfield* A1797
Continuous percolation in one dimension *D Shalitin* A1983
Finite-lattice extrapolations for Z_3 and Z_5 models *C J Hamer and M N Barber* A2009
Applications of partial differential approximants: test functions and dimensional crossover in the Ising model *J F Stilck and S R Salinas* A2027
Series expansions for the zero-temperature transverse Ising model *L G Marland* A2047
Monte Carlo simulation of a planar Ising model roughening transition *D B Abraham and E R Smith* A2059
High-temperature series expansion analyses of mixed-spin Ising models *S L Schofield and R G Bowers* A2163
Valences of sites in bond percolation *S G Whittington, K M Middlemiss and D S Gaunt* A2415
The pinning of a domain wall by weakened bonds in two dimensions *J T Chalker* A2431
Upper bounds to the correlation functions of the random-bond Ising model and n-vector model with competing interactions *T Horiguchi and T Morita* A2715
Magnetisation in some frustration models *A Sütő* A2733
Finite size scaling and crossover phenomena: the XY chain in a transverse field at zero temperature *R R dos Santos and R B Stinchcombe* A2741
Random Ising model with long-range interactions *A Theumann* A2759
Phase diagrams of the triangular Ising antiferromagnetic variational approximations *A Malakis* A2767
Q-state Potts models in Hamiltonian field theory for $Q \geq 4$ in $(1+1)$ dimensions *C J Hamer* A2981
Site bond percolation in ferromagnetic and antiferromagnetic Ising models: a renormalisation group approach *A Coniglio, F di Liberto and G Monroy* A3017
Corrections to leading singularities in systems at the upper critical dimension *H S Kogon* A3253
The 2D transverse Ising model at $T = 0$: a finite-size rescaling transformation approach *R R dos Santos, L Sneddon and R B Stinchombe* A3329
Renormalisation group calculations of the critical exponents of the n-vector model with a free surface *J Reeve and A J Guttmann* A3357

05.60 Transport processes, theory

The velocity autocorrelation function of an overdamped Brownian system with hard-core interaction *S Hanna, W Hess and R Klein* AL493
Orthogonal polynomials in transport theories *J S Dehesa* A297
A numerical study of the general Rayleigh's piston model *J A Barker, M R Hoare and S Raval* A423
Quasihydrodynamic theory of ionic conductance in spatially homogeneous solutions of strong electrolytes *A R Altenberger* A957

Higher-order Einstein relations for nonlinear charge transport *S A Hope, G Féat and P T Landsberg* A2377
A comparison of approximation methods for kinetic corrections to lineshape predictions *E A Johnson* A2705

05.70 Thermodynamics

q-state Potts models in *d* dimensions: Migdal–Kadanoff approximation *D Andelman and A N Berker* AL91
Measurement-theory approach to an internal energy function *T Nakagomi* A303
Non-stationary thermodynamics and wave propagation in heat conducting viscous fluids *F Bampi and A Morro* A631
Thermodynamics of 1D soliton-bearing Hamiltonians: Transfer integral structure and correlation functions *A R Bishop* A883
Nonlinear mode phenomenology for sine-Gordon breather excitations *A R Bishop* A1417
Some exact and approximate solutions of the nonlinear Boltzmann equation with applications to aerosol coagulation *M M R Williams* A2073
Goldstone modes and coexistence in isotropic *N*-vector models *I D Lawrie* A2489
On the thermodynamics of independent Landau electrons *A Wasserman and J Kamiewicz* A2789
Wavevector dependence of the effective diffusion coefficient for solutions of macromolecules *P R Wills* A3093
The renormalisation group and global G×G′ theories about four dimensions *R D Pisarski and D L Stein* A3341

05.90 Other topics in statistical physics and thermodynamics

Singular behaviour of the free energy in the sol–gel transition *M Daoud and A Coniglio* AL301
Molecular-field theory of interface pinning in an external potential *T W Burkhardt and V R Vieira* AL223
Coagulation with fragmentation *J D Barrow* A729
Vulcanisation of a binary mixture of long polymers *A E González and M Daoud* A2441
On the mean radius of gyration of a polymer chain *M K Kosmas* A2779

10.00 THE PHYSICS OF ELEMENTARY PARTICLES AND FIELDS

The velocity dependence of inter-soliton forces *G A Ringwood* AL199

11.00 GENERAL THEORY OF FIELDS AND PARTICLES

The phases of two-dimensional spin and four-dimensional gauge systems with $Z(N)$ symmetry *F C Alcaraz and R Köberle* A1169
On bosonisation in (1+1) dimensions *H Aratyn* A1313
Mean field theory of percolation with application to surface effects *K De'Bell and J W Essam* A1993
Finite-lattice extrapolations for Z_3 and Z_5 models *C J Hamer and M N Barber* A2009
A Dirac-like equation for the photon *T L Chow* A2173
Path-integral forms for the Klein–Gordon wavefunction *F G Krausz* A2911
Schrödinger lumps *S M Roy and V Singh* A2927
On the stability of the motion of unchanged dipoles *E H Lemke* A3181

11.10 Field theory

On the conformal covariant energy–momentum tensor *B-W Xu* AL97
The Gross–Neveu model: dynamical symmetry breaking at a Kosterlitz–Thouless phase transition *M C Ogilvie* AL519
On Klauder's pseudo-free oscillator *B S Kay* A155
Finite-lattice methods in quantum Hamiltonian field theory: I. The Ising model *C J Hamer and M N Barber* A241
Finite-lattice methods in quantum Hamiltonian field theory: II. O(2) and O(3) Heisenberg models *C J Hamer and M N Barber* A259
Exact solution of the Schrödinger and Klein–Gordon equations for generalised Hulthén potentials *M Znojil* A383
New topological indices in SO(3) Einstein–Yang–Mills theory *R F Picken* A471
Rotating fields and particle-like states of electron–positron systems *P F Browne* A597
Some remarks onVthe electronic states in disordered materials *G Parisi* A735
Effective potentials for twisted fields *R Banach* A901
On the uniqueness of the Segal quantisation of linear Bose systems *F Gallone and A Sparzani* A1341
Displaced Fock representations of the canonical commutation relations *P Basarab-Horwath* A1431
On the equivalence between the impact parameter and transverse momentum space formalisms for the Drell–Yan process *H F Jones and J Wyndham* A1457
Extended Lorentz invariance and field theory *I M Benn and R W Tucker* A1745

Equivalence principle for spontaneously broken gauge fields with external sources *C Aragone* A1781
Vacuum stress tensor for a slightly squashed Einstein universe *R Critchley and J S Dowker* A1943
Solutions of the f–g field equations *M Gürses* A1957
The Umezawa–Visconti relation for first-order field equations *W Cox* A2459
Some covariant representations of massless Fermi fields *K Kraus and R F Streater* A2467
Some covariant representations of massless boson fields *L Polley, G Reents and R F Streater* A2479
Goldstone modes and coexistence in isotropic N-vector models *I D Lawrie* A2489
Long-range interaction between spins *P C Naik and T Pradhan* A2795
The Hilbert–Schmidt cohomology for the Poincaré group *P Basarab-Horwath and L Polley* A3029
Non-singular cosmology as a result of a spontaneous breakdown of symmetries *S V Orlov* A3039
Instantons versus the low-temperature expansion *A C Davis and R J Rivers* A3047
A non-abelian Born–Infeld Lagrangian *T Hagiwara* A3059

11.20 S-matrix theory

Irregular scattering functions *M Kolsrud* A821
On the structure of ultraviolet divergences in the vacuum region of quantum electrodynamics *B Dragović and B Sazdović* A915

11.30 Symmetry and conservation laws

On the conformal covariant energy–momentum tensor *B-W Xu* AL97
$Z(2)$ gauge model on fractal lattices *D Dhar* AL185
Higher-order Noether symmetries and constants of the motion *W Sarlet and F Cantrijn* A479
Some remarkable spin-$\frac{1}{2}$-like algebraic properties of spin-$\frac{1}{2}$ matrices *F E A dos Santos and J Jayaraman* A745
Clebsch–Gordan coefficients for the corepresentations of Shubnikov point groups: II. Cubic groups *J N Kotzev and M I Aroyo* A1543
Supersymmetry, the Barducci–Casalbuoni–Lusanna Lagrangian, and the Weyl group in d dimensions *D J Almond* A1761
Symmetries, first integrals and the inverse problem of Lagrangian mechanics *W Sarlet* A2227
Completely integrable N-body quantum systems in three dimensions *A O Barut and Y Kitagawara* A2581
Algebraical confinement of coloured states *J Rembieliński* A2609
Noether symmetry of the single-particle system *Z Dongpei* A2807

11.40 Currents and their properties

On the non-unique definition of the current in the Thirring model *B L Aneva, S G Mikhov and D T Stoyanov* A493

11.80 Relativistic scattering theory

On the admissibility of repeated irreducible representations in barnacle-free unique-spin unique-mass relativistic wave equations *P M Mathews, B Vijayalakshmi, M Seetharaman and Y Takahashi* A1193
Potential scattering of Dirac particles *B Thaller* A3067

11.90 Other topics in general field and particle theory

Q-state Potts models in Hamiltonian field theory for $Q \geqslant 4$ in $(1+1)$ dimensions *C J Hamer* A2981

12.00 SPECIFIC THEORIES AND INTERACTION MODELS; PARTICLE SYSTEMATICS

12.20 Electromagnetic and unified gauge fields

Stable states of a relativistic bilocal stochastic oscillator: a new quark-lepton model *N C Petroni, Z Marić, Dj Živanović and J P Vigier* A501
Solution of the gauge identities in the axial gauge *R Delbourgo* A753
On the structure of ultraviolet divergences in the vacuum region of quantum electrodynamics *B Dragović and B Sazdović* A915
Gauge covariance and the gauge technique *R Delbourgo, B W Keck and C N Parker* A921
A class of SU(2) instanton configurations in curved space–times *B P Dolan* A1205
A derivation of the Prasad–Sommerfield solution *D H Tchrakian* A1439
Harmonic maps and self-dual SU(3) gauge fields *B C Xanthopoulos* A1445
Axial vacuum symmetry of the unified gauge theories with the gravitational mechanism of instability *V M Nikolaenko* A1685
On coexistence of the Higgs mechanism with the asymptotic freedom *O K Kalashnikov* A1775
Equivalence principle for spontaneously broken gauge fields with external sources *C Aragone* A1781

Long-range interaction between spins *P C Naik and T Pradhan* A2795
A new method for scalar instanton spectrum investigation *G G Leptukh and A G Ushveridze* A3085

12.25 Models for gravitational interactions
Solutions of the *f–g* field equations *M Gürses* A1957

12.40 Models of strong interactions
Confluent singularities in directed bond percolation *J Adler, M Moshe and V Privman* AL363
Exact solution of the Schrödinger and Klein–Gordon equations for generalised Hulthén potentials *M Znojil* A383
On the equivalence between the impact parameter and transverse momentum space formalisms for the Drell–Yan process *H F Jones and J Wyndham* A1457
Solutions of the *f–g* field equations *M Gürses* A1957
Algebraical confinement of coloured states *J Rembieliński* A2609

12.90 Miscellaneous theoretical ideas and models
Rotating fields and particle-like states of electron–positron systems *P F Browne* A597
Non-linear dynamics of the fermion–boson model: interference between revivals and the transition to irregularity *H-I Yoo, J J Sanchez-Mondragon and J H Eberly* A1383
Algebraical confinement of coloured states *J Rembieliński* A2609

13.00 SPECIFIC REACTIONS AND PHENOMENOLOGY
On the equivalence between the impact parameter and transverse momentum space formalisms for the Drell–Yan process *H F Jones and J Wyndham* A1457

14.00 PROPERTIES OF SPECIFIC PARTICLES AND RESONANCES
Stable states of a relativistic bilocal stochastic oscillator: a new quark-lepton model *N C Petroni, Z Marić, Dj Živanović and J P Vigier* AL501
Rotating fields and particle-like states of electron–positron systems *P F Browne* A597

20.00 NUCLEAR PHYSICS

On the possibility of stable quark and pion-condensed stars *B Kämpfer* AL471

21.00 NUCLEAR STRUCTURE
Lie algebra projectors and the kinematics of collective motions *P Gulshani* A97
On the energy shape dependences of ellipsoidal leptodermous systems *B Remaud and G Royer* A2897

24.00 NUCLEAR REACTIONS AND SCATTERING: GENERAL
On the reducibility of the Voigt functions *H Exton* AL75

30.00 ATOMIC AND MOLECULAR PHYSICS

31.00 ELECTRONIC STRUCTURE OF ATOMS AND MOLECULES: THEORY
Hydrogen atom in a strong magnetic field: on the existence of the third integral of motion *M Robnik* A3195

32.00 ATOMIC SPECTRA AND INTERACTIONS WITH PHOTONS
On the reducibility of the Voigt functions *H Exton* AL75
Matrix mutual orthogonality and parameter independence *D J Newman* AL429
Hydrogen atom in a strong magnetic field: on the existence of the third integral of motion *M Robnik* A3195

33.00 MOLECULAR SPECTRA AND INTERACTIONS WITH PHOTONS
An approximate analytical treatment of the $E \otimes \varepsilon$ Jahn–Teller effect *H Barentzen, G Olbrich and M C M O'Brien* A111
Estimates of the A^2-term in the interaction of matter with radiation *P Pfeifer* AL129

34.00 ATOMIC AND MOLECULAR COLLISION PROCESSES AND INTERACTIONS
Irregular scattering functions *M Kolsrud* A821

36.20 MACROMOLECULES AND POLYMER MOLECULES
A configurational phase transition induced by topological entanglements between long chain molecules *M G Brereton and S Shah* AL51
Dynamics of Na^+-polystyrene sulphonate in solution at low ionic strength *F Grüner,*

W P Lehmann, H Fahlbusch and R Weber AL307
Virial expansion of a two-dimensional polymer chain: cancellation of logarithmic terms *C Domb and P J Ratcliffe* AL373
Averages in restricted random walks *C Domb* A219
Surface critical exponents for self-avoiding walks on the tetrahedral lattice *T Ishinabe and S G Whittington* A439
Irreducible representations of the symmetry groups of polymer molecules: II *I B Božović and M Vujičić* A777
Configurational properties of dilute polymer solutions, dimensionality and perturbation theory *M K Kosmas* A931
Renormalisation group study of polyelectrolyte chains *G Jug and G Rickayzen* A1357
A renormalisation group approach to the entropy of a single polymer *D J Elderfield* A1797
Irreducible representations of the symmetry groups of polymer molecules: III. Consequences of time-reversal symmetry *I Božović and N Božović* A1825
Viscosity of polymer solutions *M Muthukumar* A2129
On the mean radius of gyration of a polymer chain *M K Kosmas* A2779
Wavevector dependence of the effective diffusion coefficient for solutions of macromolecules *P R Wills* A3093
Observation of a long-time tail in Brownian motion *G L Paul and P N Pusey* A3301
Scaling properties of the entropy of polymer solutions *D J Elderfield* A3367

40.00 CLASSICAL AREAS OF PHENOMENOLOGY

41.00 ELECTRICITY AND MAGNETISM; FIELDS AND CHARGED PARTICLES

Magnetic susceptibility of relativistic Fermi gas *E M Chudnovsky* A2091

41.10 Classical electromagnetism

Theorem relating to the development of a reflection coefficient in terms of a small parameter *J Heading* A357
The electrostatic problem of a portion of sphere protruding from a plane electrode in an electric field *R Le Ny* A945
On the finite difference between divergent sum and integral *G Barton* A1009
Magnetic field due to helical currents on a torus *W N-C Sy* A2095
Diffractal echoes *M V Berry and T M Blackwell* A3101

41.70 Particles in electromagnetic fields: classical aspects

Analysis of intensity effects in laser electron-beam backscattering in terms of generalised Bessel functions *C Leubner and E M Strohmaier* A509
Rotating fields and particle-like states of electron–positron systems *P F Browne* A597
Nonlinear scattering processes in the presence of a quantised radiation field: II. Relativistic treatment *J Bergou and S Varró* A2281
e–e scattering in the presence of an external field *J Bergou, S Varró and M V Fedorov* A2305

42.00 OPTICS

42.20 Propagation and transmission in inhomogeneous media

Theorem relating to the development of a reflection coefficient in terms of a small parameter *J Heading* A357
The equality of multiple integrals in the series development of a reflection coefficient for waves governed by a general linear differential equation *J Heading* A2881

42.30 Optical information image formation and analysis

Quantum bounds on the information capacity of narrow-band free-space links without extraneous noise *W G Chambers* A133
A lower bound on the information capacity of a quantum narrow-band free-space link *W G Chambers* A2625

42.50 Quantum optics

Estimates of the A^2-term in the interaction of matter with radiation *P Pfeifer* AL129
Quantum bounds on the information capacity of narrow-band free-space links without extraneous noise *W G Chambers* A133
Non-linear dynamics of the fermion–boson model: interference between revivals and the transition to irregularity *H-I Yoo, J J Sanchez-Mondragon and J H Eberly* A1383
A lower bound on the information capacity of a quantum narrow-band free-space link *W G Chambers* A2625

42.65 Nonlinear optics

Analytic solutions for three- and four-wave mixing via generalised Bose operators *J Katriel and D G Hummer* A1211

44.00 HEAT FLOW, THERMAL AND THERMODYNAMIC PROCESSES

Some exact and approximate solutions of the

nonlinear Boltzmann equation with applications to aerosol coagulation *M M R Williams* A2073
Magnetic susceptibility of relativistic Fermi gas *E M Chudnovsky* A2091

46.00 MECHANICS, ELASTICITY, RHEOLOGY
Intermittency in the presence of noise *J-P Eckmann, L Thomas and P Wittwer* A3135

47.00 FLUID DYNAMICS
Nonlinear stability analysis in multilayer quasigeostrophic systems *S Pierini and A Vulpiani* AL203
H theorems in statistical fluid dynamics *G F Carnevale, U Frisch and R Salmon* A1701
Intermittency in the presence of noise *J-P Eckmann, L Thomas and P Wittwer* A3135

50.00 FLUIDS, PLASMAS AND ELECTRIC DISCHARGES

51.00 KINETIC AND TRANSPORT THEORY OF FLUIDS; PHYSICAL PROPERTIES OF GASES
Dynamics of Na^+–polystyrene sulphonate in solution at low ionic strength *F Grüner, W P Lehmann, H Fahlbusch and R Weber* AL307
Asymptotic solutions of time dependent anharmonic oscillator equation *M-P Moraux, E Fijalkow and M R Feix* A1611
H theorems in statistical fluid dynamics *G F Carnevale, U Frisch and R Salmon* A1701
A comparison of approximation methods for kinetic corrections to lineshape predictions *E A Johnson* A2705

52.00 THE PHYSICS OF PLASMAS AND ELECTRIC DISCHARGES
Nonlinear scattering processes in the presence of a quantised radiation field: I. Non-relativistic treatment *J Bergou and S Varró* A1469
The stabilisation of explosive instabilities in the presence of a third-order nonlinear effect *S De, T P Khan and R K Roychowdhury* A1789
Magnetic field due to helical currents on a torus *W N-C Sy* A2095
Slowly varying nonlinear waves in a warm plasma stream *R J Gribben and E J Parkes* A2113
Parametric instabilities in randomly inhomogeneous plasma *T P Khan and R K Roychowdhury* A2121
Nonlinear scattering processes in the presence of a quantised radiation field: II. Relativisitic treatment *J Bergou and S Varró* A2281
e–e scattering in the presence of an external field *J Bergou, S Varró and M V Fedorov* A2305

60.00 CONDENSED MATTER; STRUCTURE, THERMAL AND MECHANICAL PROPERTIES

H theorems in statistical fluid dynamics *G F Carnevale, U Frisch and R Salmon* A1701

61.00 STRUCTURE OF LIQUIDS AND SOLIDS; CRYSTALLOGRAPHY
Singular behaviour of the free energy in the sol–gel transition *M Daoud and A Coniglio* AL301
Configurational properties of dilute polymer solutions, dimensionality and perturbation theory *M K Kosmas* A931
Subgroups of weak–direct products and magnetic axial point groups *M Damnjanović and M Vujičić* A1055
Auxiliary sites in the RISM approximation for molecular fluids *P T Cummings, C G Gray and D E Sullivan* A1483
Clebsch–Gordan coefficients for the corepresentations of Shubnikov point groups: II. Cubic groups *J N Kotzev and M I Aroyo* A1543
Vulcanisation of a binary mixture of long polymers *A E González and M Daoud* A2441

63.00 LATTICE DYNAMICS AND CRYSTAL STATISTICS
Solitary waves in a two-dimensional diatomic lattice *G Behnke and H Büttner* AL113
Effective field of a dipole in a lattice of polarisable spheres *P Wielopolski* AL263
An approximate analytical treatment of the E⊗e Jahn–Teller effect *H Barentzen, G Olbrich and M C M O'Brien* A111

Unique labelling schemes for local modes in lattices *D J Newman* A3143

64.00 EQUATIONS OF STATE, PHASE EQUILIBRIA, AND PHASE TRANSITIONS

Single-scaling-field approach for an isolated polymer chain *S Redner and P J Reynolds* AL55

Critical exponents of two-dimensional Potts and bond percolation models *H W J Blöte, M P Nightingale and B Derrida* AL45

Localisation–delocalisation transition in a solid-on-solid model with a pinning potential *T W Burkhardt* AL63

q-state Potts models in d dimensions: Migdal–Kadanoff approximation *D Andelman and A N Berker* AL91

On the critical region of systems with two order parameters *N S Tonchev and D I Uzunov* AL103

The Heisenberg antiferromagnetic chain *B Hu and C S Ting* AL189

Monte Carlo simulation of a model of a surfactant *D B Abraham and E R Smith* AL193

Monte Carlo study of the antiferromagnetic Potts model on frustrated lattices *G S Grest* AL217

Molecular-field theory of interface pinning in an external potential *T W Burkhardt and V R Vieira* AL223

Percolative phase transition without the appearance of an infinite network *F Delyon, B Souillard and D Stauffer* AL243

Singular behaviour of the free energy in the sol–gel transition *M Daoud and A Coniglio* AL301

Polymer statistics on a Cayley tree *S L A de Queiroz* AL339

Percolation and conduction in a random resistor-diode network *S Redner* AL349

Lower-dimensional defect transitions in self-avoiding walks and percolation *H Nakanishi* AL355

Directed percolation: pseudo-correlation length *W Klein and W Kinzel* AL405

Finite size scaling analysis of the dilute Baxter–Wu model *W Kinzel, E Domany and A Aharony* AL417

Dissipative bifurcation ratio in the area-non-preserving Hénon map *B Hu* AL423

Fluctuation-induced second-order phase transitions *F Fucito and G Parisi* AL499

On the range of validity of the 6–ϵ expansion for percolation *F Fucito and G Parisi* AL507

Differential formulation of the renormalisation group in the large-n limit *G Busiello, L De Cesare and I Rabuffo* AL513

The Gross–Neveu model: dynamical symmetry breaking at a Kosterlitz–Thouless phase transition *M C Ogilvie* AL519

The Ising model in a random field; supersymmetric surface fluctuations and their implications in three dimensions *H S Kogon and D J Wallace* AL527

On phase separation in the generalised spherical model *N Angelescu, M Bundaru and G Costache* AL533

Correlation function of one-dimensional Ising model with power-law potential *A K Bassiouny* A227

Correction to scaling exponents and critical properties of the n-vector model with dimensionality >4 *A J Guttmann* A233

Finite-lattice methods in quantum Hamiltonian field theory: I. The Ising model *C J Hamer and M N Barber* A241

Finite-lattice methods in quantum Hamiltonian field theory: II. O(2) and O(3) Heisenberg models *C J Hamer and M N Barber* A259

Optimal real-space renormalisation *T A Witten Jr and J J Prentis* A447

Semi-infinite ϕ^4 systems: ϵ expansions for susceptibility exponents *J S Reeve and A J Guttmann* A687

Scaling studies of percolation phenomena in systems of dimensionality two to seven: II. Equation of state *H Nakanishi and H E Stanley* A693

Anisotropic bond percolation by position-space renormalisation group *H Nakanishi, P J Reynolds and S Redner* A855

The phases of two-dimensional spin and four-dimensional gauge systems with $Z(N)$ symmetry *F C Alcaraz and R Köberle* A1169

Renormalisation group study of polyelectrolyte chains *G Jug and G Rickayzen* A1357

Spin–spin correlation function in the high-temperature Villain model *R A Pelcovits* A1693

A renormalisation group approach to the entropy of a single polymer *D J Elderfield* A1797

Applications of partial differential approximants: test functions and dimensional crossover in the Ising model *J F Stilck and S R Salinas* A2027

Series expansions for the zero-temperature transverse Ising model *L G Marland* A2047

Monte Carlo simulation of a planar Ising model roughening transition *D B Abraham and E R Smith* A2059

The pinning of a domain wall by weakened bonds in two dimensions *J T Chalker* A2431
Position-space renormalisation group for isolated polymer chains *S Redner and P J Reynolds* A2679
Random Ising model with long-range interactions *A Theumann* A2759
Essential singularity in the *XY* spin-1 chain with uniaxial anisotropy *R Jullien and P Pfeuty* A3111
Corrections to leading singularities in systems at the upper critical dimension *H S Kogon* A3253
The self-avoiding domain problem and generalised Potts models *H N V Temperley* A3261
Pairing transition of a one-dimensional classical plasma *H Schulz* A3277
The renormalisation group and global G × G′ theories about four dimensions *R D Pisarski and D L Stein* A3341
Scaling properties of the entropy of polymer solutions *D J Elderfield* A3367

65.00 THERMAL PROPERTIES OF CONDENSED MATTER
q-state Potts models in *d* dimensions: Migdal–Kadanoff approximation *D Andelman and A N Berker* AL91
On a phenomenological non-equilibrium entropy for a class of rigid heat conductors *J Casas-Vázquez and D Jou* A1225
On the thermodynamics of independent Landau electrons *A Wasserman and J Karniewicz* A2789

66.00 TRANSPORT PROPERTIES OF CONDENSED MATTER (NONELECTRONIC)
The velocity autocorrelation function of an overdamped Brownian system with hard-core interaction *S Hanna, W Hess and R Klein* AL493
Dynamics of Na^+–polystyrene sulphonate in solution at low ionic strength *F Grüner, W P Lehmann, H Fahlbusch and R Weber* AL307
Quasihydrodynamic theory of ionic conductance in spatially homogeneous solutions of strong electrolytes *A R Altenberger* A957
Observation of a long-time tail in Brownian motion *G L Paul and P N Pusey* A3301

67.00 QUANTUM FLUIDS AND SOLIDS; LIQUID AND SOLID HELIUM
Ladder approximation to fermion quasi-particle interaction for exponentially varying bare potentials *R E Nettleton* A971
Dynamical group model of superfluid helium three *A I Solomon* A2177

68.00 SURFACES AND INTERFACES; THIN FILMS AND WHISKERS
Monte Carlo simulation of a model of a surfactant *D B Abraham and E R Smith* AL193
Molecular-field theory of interface pinning in an external potential *T W Burkhardt and V R Vieira* AL223
Lower-dimensional defect transitions in self-avoiding walks and percolation *H Nakanishi* AL355
Q-state Potts models in Hamiltonian field theory for $Q \geqslant 4$ in $(1+1)$ dimensions *C J Hamer* A2981

70.00 CONDENSED MATTER: ELECTRONIC STRUCTURE, ELECTRICAL

71.00 ELECTRON STATES
Matrix mutual orthogonality and parameter independence *D J Newman* AL429
Asymptotic expressions for the widths of low-lying energy bands in one-dimensional periodical potentials *T P Grozdanov and S Yu Slavyanov* A1513
Dynamics of Bloch electrons in external electric fields: I. Bounds for interband transitions and effective Wannier Hamiltonians *A Nenciu and G Nenciu* A2817
Unique labelling schemes for local modes in lattices *D J Newman* A3143

72.00 ELECTRONIC TRANSPORT IN CONDENSED MATTER
Alternative renormalisation in the Kondo problem *P Lloyd, A W Mirtschin and D M Cragg* A659

74.00 SUPERCONDUCTIVITY
Renormalisation-group treatment of systems with superconducting and other orderings in a magnetic field *N S Tonchev and D I Uzunov* A521

75.00 MAGNETIC PROPERTIES AND MATERIALS

Varying exponent of the impurity magnetisation in the Ising chain with a transverse field *K Uzelac, R Jullien and P Pfeuty* AL17

Critical exponents of two-dimensional Potts and bond percolation models *H W J Blöte, M P Nightingale and B Derrida* AL45

Localisation–delocalisation transition in a solid-on-solid model with a pinning potential *T W Burkhardt* AL63

The pair correlation function in the ground state of the two-dimensional spin-$\frac{1}{2}$ XY model *S B Kelland, D D Betts and J Oitmaa* AL69

q-state Potts models in d dimensions: Migdal–Kadanoff approximation *D Andelman and A N Berker* AL91

The two-dimensional bond-diluted transverse Ising model at zero temperature *R R dos Santos* AL179

A new mapping between self-avoiding walks and the $n \rightarrow 0$ limit *P D Gujrati* AL345

Binding of a domain wall in the planar Ising ferromagnet *D B Abraham* AL369

Metastable states in the solvable spin glass model *A J Bray and M A Moore* AL377

Calculation of crossover exponent from Heisenberg to Ising behaviour using the fourth-order ε expansion *J E Kirkham* AL437

On phase separation in the generalised spherical model *N Angelescu, M Bundaru and G Costache* AL533

The Ising model in a random field; supersymmetric surface fluctuations and their implications in three dimensions *H S Kogon and D J Wallace* AL527

Infinite- and finite-spin Ising chains at low temperatures *M R Davies, C K Harris and R B Stinchcombe* A459

Vortices in the two-dimensional $s = \frac{1}{2}$ XY model *D D Betts, F C Salevsky and J Rogiers* A531

Alternative renormalisation in the Kondo problem *P Lloyd, A W Mirtschin and D M Cragg* A659

Some remarks on the electronic states in disordered materials *G Parisi* A735

Thermodynamics of 1D soliton-bearing Hamiltonians: Transfer integral structure and correlation functions *A R Bishop* A883

Domain wall singularity in a Landau–Ginzburg model *I D Lawrie and M J Lowe* A981

A boundary layer theory for the distribution of magnetisation in small spherical ferromagnetic particles *G Rowlands* A993

Orbital diamagnetism of a charged Brownian particle undergoing a birth–death process *A M Jayannavar and N Kumar* A1399

Nonlinear mode phenomenology for sine-Gordon breather excitations *A R Bishop* A1417

Finite-lattice extrapolations for Z_3 and Z_5 models *C J Hamer and M N Barber* A2009
